GETTING READY - An adult should install and replace batteries

Explorer

1. Remove battery door with a screwdriver, and slide out the battery cartridge. Insert 4 x AA alkaline batteries. Ensure that the polarity is correct.
2. Align the groove at one end of the cartridge to the corresponding wall in the battery compartment and insert the cartridge. The cartridge can only be inserted in one direction. Do not jam it in by force.
3. Replace the battery door and screw it in tightly to prevent water seepage. Water in the battery compartment will cause rapid power discharge. The battery door can only fit in one direction.
4. Pull down the periscope to turn on the power. The red light at the rear of the conning tower should turn on.

Controller

1. Remove battery door with a screwdriver, and insert 1 x 9V battery in the correct polarity.
2. Replace battery cover and screw it in tightly. The battery door can only fit in one direction.
3. Press any one of the black directional arrows. The corresponding propellers should operate, and the beam light, under the observation deck, should turn on.

Now are ready to play.

Controlling The Explorer

1. Press down the periscope to turn on the power. The red light at the rear of the conning tower should turn on. This light will continue to be on until you switch off the power by pulling up the periscope.
2. Once the 9V battery has been inserted, the controller is always on. Check the battery condition by pressing any of the black directional buttons. The corresponding propeller will operate.
3. Depressing the forward arrow will move the Explorer forward. Both propellers will operate.
4. Depressing the left arrow will operate the left propeller only, and the Explorer will make a sharp left turn.
5. Depressing the right arrow will operate the right motor only, and the Explorer will make a sharp right turn.
6. Depressing the back arrow will reverse the directional spin of both propellers, and the Explorer will move backwards.
7. Not depressing any buttons will cause the propellers to stop, and the Explorer will slowly float vertically to the surface.
8. If the Explorer does not move forward straight, manually adjust the angle of the rudders until you have achieved the desired result.

Controlling The Angle Of Dive

1. Each propeller arm can be tilted manually to any one of 4 positions.
2. Position 1 will cause the Explorer to make a steep dive.
3. Positions 2 and 3 will give less steep dives.
4. Position 4 will make the Explorer move horizontally.

Adjusting For Water Buoyancy Differences

1. The diving weight container is located on the outside of the battery cover. There are 4 metal weights inside.
2. Firstly, immerse the Explorer completely into the water and shake it gently to remove all internal air bubbles.
3. Secondly, check that the water surface is approximately level with the horizontal line of the conning tower. The water surface should be above the height of propellers when they are in Position 1. This would enable the Explorer to perform a steep dive. Remove the metal weights, one by one, until you have achieved the desired result.
