**Empirical Agent-Based Modelling - Challenges and Solutions** Alexander Smajgl,Olivier Barreteau,2013-09-12 This instructional book showcases techniques to parameterise human agents

in empirical agent based models ABM In doing so it provides a timely overview of key ABM methodologies and the most innovative approaches through a variety of empirical applications It features cutting edge research from leading academics and practitioners and will provide a guide for characterising and parameterising human agents in empirical ABM In order to facilitate learning this text shares the valuable experiences of other modellers in particular modelling situations Very little has been published in the area of empirical ABM and this contributed volume will appeal to graduate level students and researchers studying simulation modeling in economics sociology ecology and trans disciplinary studies such as topics related to sustainability In a similar vein to the instruction found in a cookbook this text provides the empirical modeller with a set of recipes ready to be implemented Agent based modeling ABM is a powerful simulation modeling technique that has seen a dramatic increase in real world applications in recent years In ABM a system is modeled as a collection of autonomous decision making entities called agents Each agent individually assesses its situation and makes decisions on the basis of a set of rules Agents may execute various behaviors appropriate for the system they represent for example producing consuming or selling ABM is increasingly used for simulating real world systems such as natural resource use transportation public health and conflict Decision makers increasingly demand support that covers a multitude of indicators that can be effectively addressed using ABM This is especially the case in situations where human behavior is identified as a critical element As a result ABM will only continue its rapid growth This is the first volume in a series of books that aims to contribute to a cultural change in the community of empirical agent based modelling This series will bring together representational experiences and solutions in empirical agent based modelling Creating a platform to exchange such experiences allows comparison of solutions and facilitates learning in the empirical agent based modelling community Ultimately the community requires such exchange and learning to test approaches and thereby to develop a robust set of techniques within the domain of empirical agent based modelling Based on robust and defensible methods agent based modelling will become a critical tool for research agencies decision making and decision supporting agencies and funding agencies This series will contribute to more robust and defensible empirical agent based modelling [Learning Java Programming in Clara's World](#) Anton
