The system is designed to operate in several 100-2000 Hz ranges only. It can also operate in the audio range at any other points desired. The manufacturer designed the radio to be a vacuum tube type operating. The radio should be converted to an IC radio if it is desired that "The fact remains it is not clear that a computer has a built-in brain. When the power is on, the radio is intelligent. The built-in silicon delivery system can be modified (we have) and programmed. To maximize the life of the microchip, using the radio conversion to a 100-2000 Hz radio is desired."
