**Mathematics Benchmarking Report**, 2001     *Going Gradeless, Grades 6-12* Elise Burns, Elise B Naramore, David Frangiosa, 2021-02-23 Grade reform and standards based grading SBG is a hotly debated issue in education As one high school administrator puts it Traditional letter grading is probably the biggest elephant in the room in regard to school reform We start grading at a young age and it becomes all about accumulating points and it's not about the learning anymore Dan Kelley principal of Smithfield High School Rhode Island When students can focus less on the score and more on the learning great things happen SBG is even more challenging in high school In this book the authors share their districts successes moving to alternate assessment methods that promote learning rather than solely achievement The proponents of grade reform highlight the arbitrary nature of grades the undue stress experienced by some learners and the potential interference in the process of learning On the other hand opponents reference the lack of accountability and a shift away from content knowledge that is perceived in many alternate assessment models This book outlines how to remove the negative impacts of grades while still maintaining a high level of accountability While the majority of other books in this space provide a rationale for why the shift is necessary these authors provide the classroom teacher's perspective and concrete examples of how these approaches can be developed and applied They provide sample assessments student work samples an accountability checklist a sample of their rubrics and a review of our collected data     **Benchmarks for Science Literacy** American Association for the Advancement of Science, 1994-01-06 Published to glowing praise in 1990 Science for All Americans defined the science literate American describing the knowledge skills and attitudes all students should retain from their learning experience and offered a series of recommendations for reforming our system of education in science mathematics and technology Benchmarks for Science Literacy takes this one step further Created in close consultation with a cross section of American teachers administrators and scientists Benchmarks elaborates on the recommendations to provide guidelines for what all students should know and be able to do in science mathematics and technology by the end of grades 2 5 8 and 12 These grade levels offer reasonable checkpoints for student progress toward science literacy but do not suggest a rigid formula for teaching Benchmarks is not a proposed curriculum nor is it a plan for one it is a tool educators can use as they design curricula that fit their student's needs and meet the goals first outlined in Science for All Americans Far from pressing for a single educational program Project 2061 advocates a reform strategy that will lead to more curriculum diversity than is common today IBenchmarks emerged from the work of six diverse school district teams who were asked to rethink the K 12 curriculum and outline alternative ways of achieving science literacy for all students These teams based their work on published research and the continuing advice of prominent educators as well as their own teaching experience Focusing on the understanding and interconnection of key concepts rather than rote memorization of terms and isolated facts Benchmarks advocates building a lasting understanding of science and related fields In a culture increasingly pervaded by
