

# Common Disorders of the Endocrine System

pancreas: insulin secretion

Describe some common disorders of the endocrine system?

**Diabetes**

**Hyperthyroidism**

**Hypothyroidism**

**Addison's Disease**

**Cushing's syndrome**

**Hashimoto's thyroiditis**

Describe some common disorders of the endocrine system?

**Diabetes:** Diabetes mellitus is a chronic disease that occurs when the body either does not produce enough insulin or cannot use the insulin it produces effectively. Insulin is a hormone that allows glucose to enter the cells and be used for energy. Without enough insulin, glucose builds up in the blood and can cause serious complications if not treated properly. There are two main types of diabetes: Type 1, where the body does not produce enough insulin, and Type 2, where the body does not use insulin effectively. Both types can lead to long-term complications if not managed properly.

**Hyperthyroidism:** Hyperthyroidism is a condition where the thyroid gland produces too much thyroid hormone. This can lead to a variety of symptoms, including weight loss, rapid heartbeat, and increased sweating. It is often caused by an autoimmune reaction where the body's immune system attacks the thyroid gland.

**Hypothyroidism:** Hypothyroidism is a condition where the thyroid gland does not produce enough thyroid hormone. This can lead to symptoms such as weight gain, fatigue, and depression. It is often caused by an autoimmune reaction where the body's immune system attacks the thyroid gland.

**Addison's Disease:** Addison's disease is a rare condition where the adrenal glands do not produce enough of the hormones cortisol and aldosterone. This can lead to symptoms such as fatigue, weight loss, and low blood pressure. It is often caused by an autoimmune reaction where the body's immune system attacks the adrenal glands.

**Cushing's syndrome:** Cushing's syndrome is a condition where the body produces too much of the hormone cortisol. This can lead to symptoms such as weight gain, high blood pressure, and diabetes. It is often caused by a tumor on the adrenal gland or by the long-term use of corticosteroid medications.

**Hashimoto's thyroiditis:** Hashimoto's thyroiditis is an autoimmune disease in which the body's immune system attacks the thyroid gland, leading to hypothyroidism. It is the most common cause of hypothyroidism in the United States.
