The endocrine system is a network of glands that produce and release hormones. Hormones are chemical substances that help control many important body functions, including the body's ability to change calories into energy that powers cells and organs.

The endocrine system influences how your heart beats, how your bones and tissues grow, even your ability to make a baby. It plays a vital role in whether or not you develop diabetes, thyroid disease, growth disorders, sexual dysfunction, and a host of other hormone-related disorders.

For example, the pituitary gland produces **prolactin**, which acts on the breasts to induce milk production. The pituitary gland also secretes hormones that act on the **adrenal glands, thyroid gland, ovaries and testes**, which in turn produce other hormones. Through secretion of its hormones, the pituitary gland controls **metabolism, growth, sexual**
