Smart Robust Operation and Trading of Integrated Energy Systems with Low Pollution Goals Kaiping Qu,Yue Zhou,Xin Fang,Shuli Wen,Shiwei Xie,2024-09-23 To mitigate two major environmental concerns of global warming and air pollution renewable energies with uncertainty are increasingly deployed in power systems which challenge the system s secure operation A single system usually has limited adjusting ability In contrast integrated energy systems such as electricity gas electricity traffic electricity heat and transmission distribution coordinated systems enhance the regulating ability of renewable energy accommodation and environmental protection The operation of integrated energy systems will meet three essential requirements low pollution attribute robustness and cooperativity However the diversity of uncertainty conditions the complementarity of new energy accommodation among systems the conflict of interest between systems and the dispatch autonomy of systems challenge the requirements

mentioned above The main goal of this Research Topic includes 1 Propose more effective trading mechanisms or control strategies for carbon and air pollutant emissions 2 Fully use complementary effects between electric power natural gas heat hydrogen and traffic systems 3 Realize the coordinated operation of integrated energy systems with limited information interaction and ensured dispatch autonomy 4 Improve the robustness of integrated energy systems under diversified uncertainty conditions 5 Apply data based reinforcement learning methods for the dynamic decision of smart integrated energy systems under complex environments
