**Science SOL 5.2: Forms of Energy**

**Comprehension:** Energy can move in different ways, it can be transformed from one form to another, but it cannot be created or destroyed.

Energy is the ability to cause change or do work. Energy can be transferred or cannot move and transform energy.

Energy cannot be created or destroyed. However, it can transform. Can you think of an example in which energy transforms from one form to another? A student that says "the light from the sun" or "the heat from the stove" would make energy from one form to another. Students could be challenged to think of other examples.

Energy can move from place to place by moving objects, or through sound, light, or electric currents.

Energy can change from one form to another. For example, if a ball is thrown in the air, the ball's energy transforms from kinetic energy to potential energy. Then the ball's energy transforms back to kinetic energy as it falls. Can you think of other examples of energy transformations?

Here are some other examples of energy transformations:

light	heat	and
sound/light	sound	sound/light
mechanical/electrical	chemical	sound
sound/light	sound/light	sound/light
