Green Energy Transition in China Haifeng Deng,2024-06-17 This book contributes to the scholarly and policy debate about China's ongoing and increasingly ambitious strategies and actions in its pursuit of the green energy transition. Transitioning to a greener and more sustainable economy has become a shared policy priority worldwide in response to existential challenges posed by climate change and environmental degradation. After decades of unprecedented industrialization and economic growth at the expense of the environment, this green energy transition now tops China's development agenda. Indeed, China already has years of experience advancing climate policies and institutional and regulatory mechanisms at home and is already a major player in advocating cooperation on climate actions internationally. At the same time, the development of new electrical power systems and the energy internet in China has been shaped not only by China's overarching economic development goals and plans but also by its international engagements and commitments with the involvement of a diverse range of stakeholders and driving forces. This book focuses on exploring the legal challenges encountered in the development of China's new power system and energy internet and takes the power grid enterprises that are at the core of the energy Internet value chain as the hub to deeply explore the role of key players in China's green energy transformation in the evolution of China's climate policies and actions.

Proceedings of the Florence International Conference for Teachers of Architecture Marco Sala,1995 *Managing Energy Security* Maria G. Burns,2019-03-29 This interdisciplinary book is written for government and industry professionals who need a comprehensive accessible guide to modern energy security. Introducing the ten predominant energy types, both renewable and non-renewable, the book illustrates the modern energy landscape from a geopolitical, commercial, economic, and technological perspective. Energy is presented as the powerhouse of global economic activities. To ensure the uninterrupted supply of energy, nations, industries, and consumers need to have options. Efficient energy security planning ensures that when a primary energy source is depleted, compromised, or interrupted, an alternative energy source must be readily available. For this reason, the foundations of energy security are built upon the five pillars of Sustainability: Independence, Efficiency, Affordability, and Accessibility. The numerous case studies presented in this book demonstrate that energy security may be compromised in the absence of one out of these five ingredients. The book also entertains the Triple E notion of Energy: Efficiency, Environmental integrity, and Economies of scale used by governments and corporations for energy optimization. One of the key strengths of the book is its ability effectively to cover various scientific disciplines and several energy types while remaining comprehensible. This book will be of much interest to security or logistics professionals, economists, and engineers as well as policymakers.
