- Equivalent Fractions (PDF)

Introduction (5 minutes)

- Write the word "equivalent" on the board.
- Ask students what word they see in "equivalent" that looks familiar? Once students see the similarities to "equal," explain that equivalent fractions are fractions that are equal to one another.
- Draw a circle on the board and split it in half. Color one half of the circle. Ask students what fraction is being shown. Write " $\frac{1}{2}$ " on the board.
- Now, draw another line perpendicular to the first through the circle. Ask students what fraction is being shown now. Write " $\frac{2}{4}$ " on the board.
- Explain that although these are two different fractions, they are equivalent to one another. The amount shaded on the circle did not change, it was simply divided into more parts.

Explicit Instruction/Teacher modeling (10 minutes)

- Return to the two fractions on the board: $\frac{1}{2}$ and $\frac{2}{4}$.
- Explain that to determine if two fractions are equivalent, you must be able to multiply or divide the numerator and denominator by the same number.
- Ask students what they can multiply both the numerator and denominator by in $\frac{1}{2}$ to have it equal $\frac{2}{4}$.
- Show students other fractions that are equivalent to $\frac{1}{2}$ and $\frac{2}{4}$, such as $\frac{3}{6}$, $\frac{12}{24}$, and $\frac{100}{200}$. In each case, show students how the numerator and denominator are multiplied by the same number to create the equivalent fraction.
- Show students another fraction: $\frac{8}{24}$. Show students how the numerator and denominator could be divided by 8 to equal $\frac{1}{3}$, or by 4 to equal $\frac{2}{6}$.

Guided Practice (10 minutes)

- Have two students come up to the whiteboard at a time.
- Give students a fraction. Students need to write an equivalent fraction as quickly as possible.
- Whoever writes a correct equivalent fraction first stays at the board.
