requires taking into consideration multiple criteria of different nature economic environmental and social and in many cases within a participatory decision making framework This book presents a collection of papers dealing with different theoretical and applied issues of sustainability with the help of a modern multi criteria decision making theory with a single as well as several stakeholders involved in the decision making process Hopefully this material will encourage academics and practitioners to alter their research in this hot and vital topic After all the sustainable management of the environment and its embedded resources is one of the most important if not the major challenge of the 21st century
