Witt, David Charles Dawe, 2004 *Fragile Lives in Fragile Ecosystems* International Rice Research Institute, 1995 Fragile lives in fragile ecosystems Feeding the world's poor from neglected rice ecosystems was the theme of the 1995 International Rice Research Conference During the February meeting participants assessed progress in rice research and identified new research approaches for reducing constraints and improving productivity and sustainability of less favored and fragile rice producing areas these are the upland rainfed lowland and flood prone ecosystems Calibration and Reliability in Groundwater Modelling Marc F. P. Bierkens, J. C. Gehrels, Karel Kovar, 2006 Several of the papers here deal with decision making under uncertainty *An Introduction to Reservoir Simulation Using MATLAB/GNU Octave* Knut-Andreas Lie, 2019-08-08 This book provides a self contained introduction to the simulation of flow and transport in porous media written by a developer of numerical methods The reader will learn how to implement reservoir simulation models and computational algorithms in a robust and efficient manner The book contains a large number of numerical examples all fully equipped with online code and data allowing the reader to reproduce results and use them as a starting point for their own work All of the examples in the book are based on the MATLAB Reservoir Simulation Toolbox MRST an open source toolbox popular popularity in both academic institutions and the petroleum industry The book can also be seen as a user guide to the MRST software It will prove invaluable for researchers professionals and advanced students using reservoir simulation methods This title is also available as Open Access on Cambridge Core *Understanding Options for Agricultural Production* G.Y. Tsuji, G. Hoogenboom, P.K. Thornton, 1998-01-31 The first premise of this book is that farmers need access to options for improving their situation In agricultural terms these options might be management alternatives or different crops to grow that can stabilize or increase household income that reduce soil degradation and dependence on off farm inputs or that exploit local market opportunities Farmers need a facilitating environment in which affordable credit is available if needed in which policies are conducive to judicious management of natural resources and in which costs and prices of production are stable Another key ingredient of this facilitating environment is information an understanding of which options are viable how these operate at the farm level and what their impact may be on the things that farmers perceive as being important The second premise is that systems analysis and simulation have an important role to play in fostering this understanding of options traditional field experimentation being time consuming and costly This book summarizes the activities of the International Benchmark Sites Network for Agrotechnology Transfer IBSNAT project an international initiative funded by the United States Agency for International Development USAID IBSNAT was an attempt to demonstrate the effectiveness of understanding options through systems analysis and simulation for the ultimate benefit of farm households in the tropics and subtropics The idea for the book was first suggested at one of the last IBSNAT group meetings held at the University of Hawaii in 1993 *Crop Systems Dynamics* YIN Xinyou, H.H. van Laar, 2023-08-28 This book presents a generic process

based crop growth model GECROS Genotype by Environment interaction on CROp growth Simulator recently developed in Wageningen The model uses robust yet simple algorithms to summarize the current knowledge of individual physiological processes and their interactions and feedback mechanisms It was structured from the basics of whole crop systems dynamics to embody the physiological causes rather than descriptive algorithms of the emergent consequences It also attempts to model each process at a consistent level of detail so that no area is overemphasized and similarly no area is treated in a trivial manner Main attention has been paid to interactive aspects in crop growth such as photosynthesis transpiration coupling via stomatal conductance carbon nitrogen interaction on leaf area index functional balance between shoot and root activities and interplay between source supply and sink demand on reserve formation and remobilization GECROS combines robust model algorithm high computational efficiency and accurate model output with minimum number of input parameters that require periodical destructive sampling to estimate
