Highway Maintenance Concept Vehicle Final Report Stephen J. Andrie, 2002 This report documents Phase IV of the Highway Maintenance Concept Vehicle HMCV project a pooled fund study sponsored by the Departments of Transportation of Iowa Pennsylvania and Wisconsin This report provides the background including a brief history of the earlier phases of the project a systems overview and descriptions of the research conducted in Phase IV Finally the report provides conclusions and recommendations for future research Background The goal of the Highway Maintenance Concept Vehicle Pooled Fund Study is to provide travelers with the level of service defined by policy during the winter season at the least cost to taxpayers This goal is to be accomplished by using information regarding actual road conditions to facilitate and adjust snow and ice control activities The approach used in this study was to bring technology applications from other industries to the highway maintenance vehicle This approach is evolutionary in that as emerging technologies and applications are found to be acceptable to the pooled fund states and as they appear that to have potential for supporting the study goals they become candidates for our research The objective of Phase IV is to Conduct limited deployment of selected technologies from Phase III by equipping a vehicle with proven advanced technologies and creating a mobile test laboratory for collecting road weather data The research quickly pointed out that investments in winter storm maintenance assets must be based on benefit cost analysis and related to improving level of service For example Iowa has estimated the average cost of fighting a winter storm to be about 60 000 to 70 000 per hour typically The maintenance concept vehicle will have advanced technology equipment capable of applying precisely the correct amount of material accurately tailored to the existing and predicted pavement conditions Hence a state using advanced technology could expect to have a noticeable impact on the average time taken to establish the winter driving service level If the concept vehicle and data produced by the vehicle are used to support decision making leading to reducing material usage and the average time by one hour a reasonable benefit cost will result Data from the friction meter can be used to monitor and adjust snow and ice control activities and inform travelers of pavement surface conditions Therefore final selection of successfully performing technologies will be based on the foundation statements and criteria developed by the study team

Public Roads, 2001 Highway Maintenance Handbook Ken Atkinson, 1997-04-10 This handbook deals with the ongoing task of maintaining Britain's network of roads in a safe and satisfactory condition It provides a commentary on a range of maintenance areas and analyzes both concrete and bituminous carriageways highlighting the advantages or problems of each
