

Preparation of Letters for the IEEE Sensors Journal (February 2006)

First A. Author, Second B. Author, Jr., *Fellow IEEE*, and Third C. Author, *Member IEEE*

Abstract—These instructions, modeled after the standard format for all IEEE journal papers, give you guidelines for preparing Letters for IEEE SENSORS JOURNAL. Use this document as a template to prepare your manuscript if you are using Microsoft Word 6.0. Otherwise, use this document as an instruction set. Define all symbols used in the abstract. Do not cite references in the abstract. Do not delete the blank line immediately above the abstract; it sets the footnote at the bottom of this column.

Index Terms—About four key words or phrases in alphabetical order, separated by commas. For a list of suggested keywords, send a blank e-mail to keywords@ieee.org or visit the IEEE web site http://www.ieee.org/organizations/pubs/ami_prosd/keywrd98.txt at

I. INTRODUCTION

THIS document is a template for Microsoft Word versions 6.0 or later. If you would prefer to use LATEX, download IEEE's LATEX style and sample files from <http://www.ieee.org/organizations/pubs/transactions/stylesheets.htm>.

When you open this model DOC file, select "Page Layout" from the "View" menu in the menu bar (View | Page Layout), which allows you to see the layout of the document. Then type over the header and section of the document, or cut and paste from another document. The pull-down style menu is at the left of the Formatting Toolbar at the top of your Word window (for example, the style at this point in the document is "Text"). Highlight a section that you want to designate with a certain style, then select the appropriate name on the style menu. The

Manuscript received October 9, 2001. (Write the date on which you submitted your paper for review.) This work was supported in part by the U.S. Department of Commerce under Grant H5123456 (sponsor and financial support acknowledgment goes here). Paper titles should be written in uppercase and lowercase letters, not all uppercase. Avoid writing long formulas with subscripts in the title; short formulas that identify the elements are fine (e.g., "Ni-Fe-B"). Do not write "Olevited" in the title. Full names of authors are preferred in the author field, but are not required. Put a space between authors' initials.

of fiber optic communications technology to space optical communications. It presents the specific demands for space communications and examines propagation in a vacuum and also over the turbulence of air free space. Space Photonic Communications begins with historical aspects of optical communications in both terrestrial and inter satellite constellations. It presents the advances in optical communications and integrated photonics that have enabled the technological developments for space photonic communications especially coherent optical communications to transport Tbps information. The author discusses how the transmission of massive amounts of data over very long distances requires Tera bps communications in real time for both military and civil applications. The author also explores laser communications with the physics of laser propagation over ultra long distances without optical amplifications at intermediate locations. He also examines modulation and receiving techniques for space photonic communications. Intended for communications engineers and professionals especially those in laser communication technologies, this book could also be used in courses on advanced optical communications, photonic communications and communication techniques and technologies.

Optical Networks Debasish Datta, 2022-03-01. Following the emergence of lasers and optical fibers, optical networking made its beginning in the 1970s with high speed LANs, MANs. In the 1980s, when the bandwidth of intercity microwave links turned out to be inadequate for digital telephony, the technology for single wavelength optical communications using SONET SDH arrived as a saviour to replace the microwave links. However, single wavelength

links couldn't utilize the huge bandwidth 40 THz of optical fibers while the bandwidth demands kept soaring. This necessitated the use of wavelength division multiplexing (WDM) for concurrent transmission over multiple wavelengths, increasing the available bandwidth significantly. Today, optical networking has become an indispensable part of telecommunication networks at all hierarchical levels. The book *Optical Networks* provides a graduate level presentation of optical networks, capturing the past, present, and ensuing developments with a unique blend of breadth and depth. The book is organized in four parts and three appendices. Part I presents an overview and the enabling technologies in two chapters. Part II presents the single wavelength optical networks in three chapters, while Part III deals with the various forms of WDM optical networks in four chapters. Finally, Part IV presents some selected topics in six chapters dealing with a number of contemporary and emerging topics. *Optical Networks* provides a comprehensive all-in-one text for beginning graduate as well as final year undergraduate students and also allows R & D engineers to quickly refresh the basics and then move on to emerging topics.

Driving 5G Mobile Communications with Artificial Intelligence towards 6G Dragorad A. Milovanovic, Zoran S. Bojkovic, Tulsi Pawan Fowdur, 2023-04-06. *Driving 5G Mobile Communications with Artificial Intelligence towards 6G* presents current work and directions of continuous innovation and development in multimedia communications with a focus on services and users. The fifth generation of mobile wireless networks achieved the first deployment by 2020, completed the first phase of evolution in 2022, and started transition phase of 5G. Advanced toward the sixth generation. Perhaps one of the most important innovations brought by 5G is the platform approach to connectivity, i.e., a single standard that can adapt to the heterogeneous connectivity requirements of vastly different use cases. 5G networks contain a list of different requirements, standardized technical specifications, and a range of implementation options with spectral efficiency, latency, and reliability as primary performance metrics. Towards 6G, machine learning (ML) and artificial intelligence (AI) methods have recently proposed new approaches to modeling, designing, optimizing, and implementing systems. They are now matured technologies that improve many research fields significantly. The area of wireless multimedia communications has developed immensely, generating a large number of concepts, ideas, technical specifications, mobile standards, patents, and articles. Identifying the basic ideas and their complex interconnections becomes increasingly important. The book is divided into three major parts, with each part containing four or five chapters. Advanced 5G communication, Machine learning based communication, and network automation. *Artificial Intelligence towards 6G*. The first part discusses three main scenarios and standard specification of 5G use cases: eMBB, URLLC, mMTC, vehicular systems beyond 5G, and efficient edge architecture on NFV infrastructure. In the second part, different AI/ML based methodologies and open research challenges are presented in introducing 5G AIoT, artificial intelligence of things, scheduling in 5G/6G communication systems, application of DL techniques to modulation detection and channel coding, as well as 5G Open Source tools for experimentations and testing. The third part paved the way to deployment scenarios for different innovative services.

including technologies and applications of 5G 6G intelligent connectivity AI assisted eXtended Reality integrated 5G IoT architecture in next generation Smart Grid privacy requirements in a hyper connected world and evaluation of representative 6G use cases and technology trends The book is written by field experts from Europe and Mauritius who introduce a blend of scientific and engineering concepts covering this emerging wireless communication era It is a very good reference book for telecom professionals engineers and practitioner in various 5G vertical domains and finally a basis for student courses in 5G 6G wireless systems
