Remote Sensing Floyd F. Sabins, Jr., James M. Ellis, 2020-04-01 Remote sensing has undergone profound changes over the past two decades as GPS GIS and sensor advances have significantly expanded the user community and availability of images. New tools such as automation, cloud based services, drones, and artificial intelligence continue to expand and enhance the discipline. Along with comprehensive coverage and clarity, Sabins and Ellis establish a solid foundation for the insightful use of remote sensing with an emphasis on principles and a focus on sensor technology and image acquisition. The Fourth Edition presents a valuable discussion of the growing and permeating use of technologies such as drones and manned aircraft, imaging, DEMs, and lidar. The authors explain the scientific and societal impacts of remote sensing, review digital image processing, and GIS provide case histories from areas around the globe and describe practical applications of remote sensing to the environment, renewable and nonrenewable resources, land use, land cover, natural hazards, and climate change. Remote Sensing Digital Database includes 27 examples of satellite and airborne imagery that can be used to jumpstart labs and class projects. The database includes descriptions, georeferenced images, DEMs, maps, and metadata. Users can display, process, and interpret images with open source and commercial image processing and GIS software. Flexible, revealing, and instructive, the Digital Image Processing Lab Manual provides 12 step by step exercises on the following topics: an introduction to ENVI, Landsat, multispectral processing, image processing, band ratios, and principal components, georeferencing, DEMs, and lidar, IHS, and image sharpening, unsupervised classification, supervised classification, hyperspectral, and change detection, and radar. Introductory and instructional videos describe and guide users on ways to access and utilize the Remote Sensing Digital Database and the Digital Image Processing Lab Manual. Answer Keys are available for instructors for questions in the text as well as the Digital Image Processing Lab Manual. Manual of Geospatial Science and Technology John D.

Bossler, John R. Jensen, Robert B. McMaster, Chris Rizos, 2001-11-22 Manual of Geospatial Science and Technology shows how to work across the range of geospatial science and technology, whether as a user or as a contractor of services, employing these technologies and without either specialist education or substantial experience. The manual covers the fundamentals, providing the requisite mathematics, computer science, and physics necessary to understand how the technologies work, assuming some elementary background in calculus and physics. It also shows how the technologies can be used together and focuses on their commonalities. A number of applications, such as mapping and environmental modeling, are presented, and a Web site accompanies the book. LAB PRIMER THROUGH MATLAB® NAVAS, K.
