Hallbäck, D.S. Henningson, A.V. Johansson, P.H. Alfredsson, 2013-03-09 The aim of this book is to give within a single volume an introduction to the fields of turbulence modelling and transition to turbulence prediction and to provide the physical

background for today's modelling approaches in these problem areas as well as giving a flavour of advanced use of prediction methods. Turbulence modelling approaches ranging from single point models based on the eddy viscosity concept and the Reynolds stress transport equations (Chapters 3, 4, 5) to large eddy simulation (LES) techniques (Ch 7) are covered. The foundations of hydrodynamical stability and transition are presented (Ch 2) along with transition prediction methods based on single point closures (Ch 6), LES techniques (Ch 7) and the parabolized stability equations (Ch 8). The book addresses engineers and researchers in industry or academia who are entering into the fields of turbulence or transition modelling research or need to apply turbulence or transition prediction methods in their work.
