Advances in Autonomous Ships (AS) For Ocean Observation Xinyu Zhang, Defeng Wu, Yanzhen Gu, Gorka Bidegain , Yanlong Chen, Chengbo Wang, 2024-10-22 Ocean

observation and exploration have long been pivotal for the advancement of marine science climate change study and resource utilization However traditional oceanographic methodologies that involve crewed vessels or satellite data can be limited by factors like high operational costs potential human risk temporal and spatial resolution limitations Autonomous Ships ASs also known as Unmanned Surface Vessels USVs have emerged as a promising alternative with their high endurance lower operating costs and the capability of venturing into hazardous or hard to reach environments USVs or ASs are increasingly being utilized for oceanographic research tasks such as data collection seafloor mapping environmental monitoring and marine life surveys Equipped with a variety of sensors and devices these autonomous ships can perform observations and gather crucial oceanic data over large geographical scales and extended time frames providing a wealth of valuable information for marine scientists

Brazilian Beach Systems Andrew D. Short, Antonio Henrique da F. Klein, 2016-07-19 This book is about the more than 4 000 beach systems that form most of the 9000 km long Brazilian coast It focuses on the beaches of each of the seventeen coastal states and three oceanic islands their nature morphodynamics and status It is a must for anyone who wants to know more about this great coast and its beach systems This is the first book ever written about the beach systems of Brazil and actually the very first about the beaches of an entire country The Brazilian coast extends from the mighty Amazon River and its muddy shores in the north to one of the world s longest sandy beaches in the southern Rio Grande do Sul It contains every beach type from wave to tide dominated which range in size from small embayed beaches to long barrier beaches The book is written by leading Brazilian academics and researchers and aims at the university level market as well as coastal scientists engineers and managers Standard scientific terminology is used to describe the coast and its beaches It is illustrated with more than 400 original figures and serves as a benchmark text on the Brazilian coast

Demonstrating Observation Impacts for the Ocean and Coupled Prediction Yosuke Fujii, Peter R. Oke, Elisabeth Remy, 2025-04-25 Capabilities in ocean data assimilation developed over a decade long project called the Global Ocean Data Assimilation Experiment GODAE By the end of GODAE many countries had established operational ocean

forecast systems and mature ocean reanalysis systems These developments further improved under OceanPredict and are now being extended under several Programs and Projects under the United Nations Ocean Decade including ForeSea SynObs and CoastPredict This Research Topic is intended to showcase the activities being performed under these projects all of which share a common goal of predicting our environment to benefit society Multi-scale Variability of Ecosystem

Functioning in European and Chinese Shelf Seas Xueen Chen,Qicheng Meng,Jie Nie,Wenyan Zhang,Jun Sun ,Ute Daewel,2024-08-26 Continued global warming and ocean acidification are predicted with high confidence while the direction and magnitude of changes of other atmospheric drivers e g precipitation wind and nutrient loading are of high uncertainty and regionally dependent Biogeochemical responses of coastal shelf seas to external drivers are often nonlinear involving feedback that may amplify or dampen a perturbation imposed on the system Coupled physical biogeochemical process based numerical models have proven useful in elucidating the mechanistic interplay and relative importance of the different factors contributing to ecosystem functioning with increasing realism This research topic aims to understand and compare marine ecosystem functioning in Chinese and European shelf seas based on studies that use state of the art modeling and monitoring of coastal ecosystem dynamics This topic will enable more efficient knowledge share and distribution through a comparative assessment between distinct coastal shelf systems in China and Europe to further our understanding of complicated ecosystem dynamics in response to a changing climate and increasing anthropogenic pressure It will allow us to better understand the sensitivity of coastal shelf ecosystem functioning to physical and biogeochemical perturbations the role of shelf seas in global carbon cycling and the resilience of Chinese and European shelf seas to ongoing and future changes in climate and anthropogenic activities *Government Reports Announcements & Index* ,1989-05 **Tropical Cyclone**

Modeling and Prediction: Advances in Model Development and Its Applications Xuejin Zhang,Robert Rogers,Krishna K. Osuri,Vijay Tallapragada,Zhan Zhang,2025-06-02 Tropical cyclones TCs can cause billions of dollars in property damage and up to thousands of life losses globally every year In order to mitigate these socioeconomic impacts scientists have strived in developing sophisticated numerical modeling systems to provide better tools for research and forecast communities especially in those coastal countries and regions that are impacted substantially by TCs in the past several decades Recently several accelerated efforts were made by several research and operational centers after tremendous property and life losses by landfall TCs in the North Atlantic the Western North Pacific and the North Indian Ocean basins The modeling systems in regional forecast centers are planning to upgrade to the next generation or make significant advances through those accelerations In this Research Topic the goal is to document the latest developments physics improvements data assimilation holistic forecast systems and their applications Themes include the significant model new features high resolution physics for TC applications data assimilation methodology and observational data impacts forecast experiments model verification and validation Studies on the role of physical processes associated with the boundary layer convection and microphysics radiation

land surface processes air sea wave processes are encouraged The model evaluations including quantitative precipitation forecasts and tools and products for TC research and forecasts are welcome as well Novel studies and latest model developments having a research to operation R2O transition possibility will be considered for publication The ultimate goal is to exchange research ideas advances and understanding across the global TC communities We welcome Original Research and Review Articles from development observational numerical modeling and forecasting perspectives on TCs Articles can include but are not limited to the following topics Model development TC vortex initialization algorithm High resolution physics for TC Air sea wave interactions Model tracking and intensity verification Data assimilation methods Observational data impacts Model evaluation tools Model evaluation comparison products for research and forecasts and Novel studies based on new findings and methodology
