Equity Valuation: Science, Art, or Craft? Frank J. Fabozzi, Sergio M. Focardi, Caroline Jonas, 2017-12-27 The price at which a stock is traded in the market reflects the ability of the firm to generate cash flow and the risks associated with generating the expected future cash flows The authors point to the limits of widely used valuation techniques The most important of these limits is the inability to forecast cash flows and to determine the appropriate discount rate Another important limit is the inability to determine absolute value Widely used valuation techniques such as market multiples the price to earnings ratio firm value multiples or a use of multiple ratios for example capture only relative value that is the value of a firm's stocks related to the value of comparable firms assuming that comparable firms can be identified The study underlines additional problems when it comes to valuing IPOs and private equity Both are sensitive to the timing of the offer suffer from information asymmetry and are more subject to behavioral elements than is the case for shares of listed firms In the case of IPOs in particular the authors discuss how communication strategies and media hype play an important role in the IPO valuation pricing process

Alternative Press Index ,2005 Proxistant Vision Synne Tollerud Bull,Dragan Miletic,2025-06-24 How the surge in aerial technologies such as drones and satellites influences visual culture beyond the screen The smooth flight from aerial overview to intimate close up in Martin Scorsese s Hugo 2011 exemplifies the concept of proxistant vision a combination of proximity and distance close up and overview detail and the big picture in a unified visual form In Proxistant Vision Synne Bull and Dragan Miletic develop the concept of proxistant vision and trace its emergence as a visual paradigm of the twenty first century As exemplified by Google Earth s digital swipe between globe perspective and street level detail proxistant vision currently proliferates across digital geography computer games architectural models data visualizations and CGI cinema It is defined as the combination of proximity and distance in a single image across a dynamic flight or zoom Pointing to the surge in aerial imaging and remote sensing technologies such as drones and satellites the book moves beyond the screen to include the kinetic architecture of rides and urban observation wheels The key objective of this study is threefold to trace the genealogy and understand the technical operation of proxistance as it traveled from periphery to center in the twenty first century to explore its alternative potentialities in contemporary art practices and finally to reflect critically on the worldviews underpinning different modalities of proxistance in times of environmental crisis The authors show how the powerful effect of combining proximity and distance which was already in place with the earliest cartographic inscriptions has taken precedence on and beyond our screens today A Comparative Examination of Multi-Party Actions Joanne Blennerhassett,2016-10-20 This monograph addresses the phenomenon of mass harm and how it may be resolved through collective redress It examines particularly how such redress may be achieved through mechanisms such as multi party actions MPAs In order to do this an analytical framework is created against which to evaluate various multi party procedures

This is illustrated through the experience of a selection of common law jurisdictions in dealing with mass harm namely that of England and Wales Canada Australia and the United States as well as that of EU collective redress It examines multi party action laws benchmarked against the objectives identified in the analytical framework The phenomenon of environmental mass harm in particular is explored as a case study as it illustrates some of the difficulties that may arise in mass harm litigation Also this work explores where the best solutions for mass harm redress may lie in the future perhaps in collective actions or through alternatives such as regulation and alternative dispute resolution or a combination of these Finally the experience of mass harm litigation in Ireland is examined as currently this jurisdiction does not have an effective mechanism for dealing with mass harm This title is included in Bloomsbury Professional's International Arbitration online service

Techno-Economic Challenges of Green Ammonia as an Energy Vector Agustin Valera-Medina, Rene Banares-Alcantara, 2020-09-30 Techno Economic Challenges of Green Ammonia as an Energy Vector presents the fundamentals techno economic challenges applications and state of the art research in using green ammonia as a route toward the hydrogen economy This book presents practical implications and case studies of a great variety of methods to recover stored energy from ammonia and use it for power along with transport and heating applications including its production storage transportation regulations public perception and safety aspects As a unique reference in this field this book can be used both as a handbook by researchers and a source of background knowledge by graduate students developing technologies in the fields of hydrogen economy hydrogen energy and energy storage Includes glossaries case studies practical concepts and legal public perception and policy viewpoints that allow for thorough practical understanding of the use of ammonia as energy carrier Presents its content in a modular structure that can be used in sequence as a handbook in individual parts or as a field reference Explores the use of ammonia both as a medium for hydrogen storage and an energy vector unto itself

The Wise Company Ikujiro Nonaka, Hirotaka Takeuchi, 2019-09-13 High velocity change is the fundamental challenge facing companies today Few companies however are prepared to continuously innovate because they focus on the short term and do not emphasize the wisdom needed to make sure that their interests are aligned with those of society Practical wisdom is the bases of continuous innovation where companies ceaselessly and repeatedly creating new knowledge disseminating it throughout the organization and converting knowledge to action over time In The Wise Company legendary management experts Ikujiro Nonaka and Hirotaka Takeuchi highlight how various companies have confronted the challenge of rapid change to create new products and new ways of doing business that benefit employees consumers and society The key a relentless self renewal process where companies realize the future they envision rather than only responding to changes in the environment Nonaka and Takeuchi argue that while knowledge creating companies focusing on tacit and explicit knowledge can generate innovation they cannot create it on a continuous and ongoing basis without having wisdom about human interactions and how they influence organizational structures and practices Companies that have

resilience longevity and sustainability share a number of characteristics Nonaka and Takeuchi show Strategies are based on alignment of organizational and societal benefits Leaders grasp the core of any situation or problem quickly and intuitively comprehend the nature and meaning of people things and events But wise leadership is not enough wisdom must infuse the organization through informal as well as formal shared interactions and communications that focus on metaphors and stories that convey the essence and meaning of strategies and actions In short Nonaka and Takeuchi demonstrate how continuous innovation results from companies ceaselessly and repeatedly creating new knowledge disseminating knowledge throughout the organization and converting that knowledge to action The Wise Company presents a new model of knowledge creation and practice for the twenty first century

Recovery Improvement Qiwei Wang,2022-09-06 Oil and Gas Chemistry Management Series brings an all inclusive suite of tools to cover all the sectors of oil and gas chemicals from drilling completion to production processing storage and transportation The third reference in the series Recovery Improvement delivers the critical chemical basics while also covering the latest research developments and practical solutions Organized by the type of enhanced recovery approaches this volume facilitates engineers to fully understand underlying theories potential challenges practical problems and keys for successful deployment In addition to the chemical gas and thermal methods this reference volume also includes low salinity smart water microorganism and nanofluid based recovery enhancement and chemical solutions for conformance control and water shutoff in near wellbore and deep in the reservoir Supported by a list of contributing experts from both academia and industry this book provides a necessary reference to bridge petroleum chemistry operations from theory into more cost efficient and sustainable practical applications Covers background information and practical guidelines for various recovery enhancement domains including chapters on enhanced oil recovery in unconventional reservoirs and carbon sequestration in CO₂ gas flooding for more environment friendly and more sustainable initiatives Provides effective solutions to control chemistry related issues and mitigation strategies for potential challenges from an industry list of experts and contributors Delivers both up to date research developments and practical applications featuring various case studies

Electricity Supply Systems of the Future Nikos Hatziargyriou,Iony Patriota de Siqueira,2020-07-20 This book offers a vision of the future of electricity supply systems and CIGRE s views on the

know how that will be needed to manage the transition toward them A variety of factors are driving a transition of electricity supply systems to new supply models in particular the increasing use of renewable sources environmental factors and developments in ICT technologies These factors suggest that there are two possible models for power network development and that those models are not necessarily exclusive 1 An increasing importance of large networks for bulk transmission capable of interconnecting load regions and large centralized renewable generation resources including offshore and of providing more interconnections between the various countries and energy markets 2 An emergence of clusters of small largely self contained distribution networks which include decentralized local generation energy storage and active customer participation intelligently managed so that they operate as active networks providing local active and reactive support The electricity supply systems of the future will likely include a combination of the above two models since additional bulk connections and active distribution networks are needed in order to reach ambitious environmental economic and security reliability targets This concise yet comprehensive reference resource on technological developments for future electrical systems has been written and reviewed by experts and the Chairs of the sixteen Study Committees that form the Technical Council of CIGRE

Fragmentation vs the Constitutionalisation of International Law Andrzej Jakubowski,Karolina Wierczyńska,2016-07-01 The current system of international law is experiencing profound transformations Indeed the simultaneous processes of globalization combined with the disintegration of international systems of governance and law making pose complex challenges for legal scholarship The doctrinal response to these challenges has been theorized within two seemingly contradictory discourses in international law fragmentation and constitutionalisation This book takes an innovative approach to international law viewing the processes of the fragmentation and constitutionalisation as being profoundly interconnected and reflective of each other It brings together a select group of contributors including both established and emerging scholars and practitioners in order to explore the ways in which the problems of fragmentation and constitutionalisation are viscerally linked one to the other and thus mutually conditioning and stimulating The book considers the theory and practice of international law looking at the two phenomena in relation to the various fields of international law such as international criminal law cultural heritage law and international environmental law
