Food and Nutrition Security in Southern African Cities Bruce

Frayne,Jonathan Crush,Cameron McCordic,2017-12-22 Urban population growth is extremely rapid across Africa and this book places urban food and nutrition security firmly on the development and policy agenda It shows that current efforts to address food poverty in Africa that focus entirely on small scale farmers to the exclusion of broader socio economic and infrastructural approaches are misplaced and will remain largely ineffective in ameliorating food and nutrition insecurity for the majority of Africans Using original data from the African Food Security Urban Network's AFSUN extensive database it is demonstrated that the primary food security challenge for urban households is access to food Already linked into global food systems and value chains Africa's supply of food is not necessarily in jeopardy Rather the widespread poverty and informal urban fabric that characterizes Africa's emerging cities impinge directly on households capacity to access food that is readily available Through the analysis of empirical data collected from 6 500 households in eleven cities in nine countries in Southern Africa the authors identify the complexity of factors and dynamics that create the circumstances of widespread food and nutrition insecurity under which urban citizens live They also provide useful policy approaches to address these conditions that currently thwart the latent development potential of Africa's expanding urban population

Handbook of Climate Change and Biodiversity Walter Leal Filho, Jelena Barbir, Richard Preziosi, 2018-08-28 This book comprehensively describes essential research and projects on climate change and biodiversity Moreover it includes contributions on how to promote the climate agenda and biodiversity conservation at the local level Climate change as a whole and global warming in particular are known to have a negative impact on biodiversity in three main ways Firstly increases in temperatures are detrimental to a number of organisms especially those in sensitive habitats such as coral reefs and rainforests Secondly the pressures posed by a changing climate may lead to sets of responses in areas as varied as phenology range and physiology of living organisms often leading to changes in their lifecycles especially but not only in reproduction losses in productivity or even death In some cases the very survival of very sensitive species may be endangered Thirdly the impacts of climate change on

biodiversity will be felt in the short term with regard to some species and ecosystems but also in the medium and long term in many biomes. Indeed, if left unchecked, some of these impacts may be irreversible. Many individual governments, financial institutes and international donors are currently spending billions of dollars on projects addressing climate change and biodiversity but with little coordination. Quite often the emphasis is on adaptation efforts with little emphasis on the connections between physio ecological changes and the lifecycles and metabolisms of fauna and flora or the influence of poor governance on biodiversity. As such, there is a recognized need to not only better understand the impacts of climate change on biodiversity but to also identify, test and implement measures aimed at managing the many risks that climate change poses to fauna, flora and micro organisms. In particular, the question of how to restore and protect ecosystems from the impact of climate change also has to be urgently addressed. This book was written to address this need. The respective papers explore matters related to the use of an ecosystem based approach to increase local adaptation capacity, consider the significance of a protected areas network in preserving biodiversity in a changing northern European climate and assess the impacts of climate change on specific species including wild terrestrial animals. The book also presents a variety of case studies such as the Yellowstone to Yukon Conservation Initiative, the effects of climate change on the biodiversity of Aleppo pine forest in Senalba, Algeria, climate change and biodiversity response in the Niger Delta region and the effects of forest fires on the biodiversity and the soil characteristics of tropical peatlands in Indonesia. This is a truly interdisciplinary publication and will benefit all scholars, social movements, practitioners and members of governmental agencies engaged in research and/or executing projects on climate change and biodiversity around the world.

Food Systems Evaluation Methods and Sustainability Assessment Bradley George Ridoutt, Aida Turrini, 2024-03-08. The food system is responsible for some of society's most pressing sustainability challenges. Diets are currently unsustainable in many countries as evidenced by the growing burden of malnutrition, degradation of natural resources, contributions to climate change and unaffordability of healthy diets. There is an urgent need to address the gaps in understanding of what a sustainable food system means across varying populations and geographies and how we can better measure these systems while identifying how dietary choices impact on human health and the environment. However, decision makers and experts are questioning whether it is possible to meet environmental, social and economic goals simultaneously or whether trade offs are necessary. Thus, the development of better measurements and indicators to clearly understand the benefits and considerations for healthy and sustainable food systems is needed.

International Labor Migration and Livelihood Security in Nepal Knerr, Beatrice, 2017-07-11. As measured by its per capita income, Nepal is one of the poorest countries in the world with large parts of its population trapped in poverty within a stunning but difficult to control natural environment. Under these conditions, since the wake of the 21st century, international labour migration and the associated remittances of large amounts of foreign exchange have rapidly gained influence on the country's economic and social development triggered by internal disturbances in particular

economic downturn and political upheavals as well as external dynamics which boosted an uprising international demand for unskilled labour While there is hardly any basic dissent about the short to mid term Positive growth effect for Nepal s economy surprisingly little is known about the consequences of this form of livelihood security at the individual household level apart from some anecdotal evidence although neither policy makers nor NGOs may effectively craft their strategies without considering this phenomenon This book was developed from an Alumni Workshop held in Kathmandu in 2015 where focusing on this knowledge gap wide ranging original research about the consequences of family members absence and the receipt of remittances was presented Moving on from this starting point the authors further elaborated their work to make it accessible to a broader public and exploitable as a resource for policy making and follow up research In addition this volume includes detailed facts and figures about outmigration from and inflow of remittances to Nepal With a view to long term development implications of international migration it also considers the gain of knowledge and access to international academic networks brought into the country by returned scholars The editor of the volume B atrice Knerr is a professor of development economics affiliated to the University of Kassel Germany where until 2015 she was heading the Department of Development Economics Migration and Agricultural Policy DEMAP Afterwards she has served as guest professor at the Universidad Autonoma de Yucatan UADY in Merida Mexico and at the College of Economics of Hue University Vietnam Presently she is on contract with the Brawijaya University of Malang Indonesia where she is joining research projects on rural development and teaching various modules in the Economics Faculty As an expert in the implications of labour migration on the development of low to middle income countries she has published and edited around 30 books and 100 journal articles and book chapters *Achieving sustainable cultivation of rice Volume 1* Prof. Takuji Sasaki, 2017-05-22
