

Endangered Species

As the world is developing it is seen that several conflicts have arisen within the environment itself. These conflicts relate to the loss of natural surroundings such as the rain forests and Arctic ice. Moreover another trend which has been related to the development of the world is related to the extinction of certain species existing in the world. The organisms or species which are at risk of extinction are known as the endangered species. These species are the ones who are believed to get extinct because of the environmental and human factors involved. The species getting extinct are not limited to the developing nations of India and Pakistan but also spread to the developed world. It is for this purpose that many organizations have been formed all over the world to decrease the number of endangered species all over the world. The International Union for Conservation of Nature is one organization dedicated to find solution to decrease the effect of environment on the endangered species. In 2010 the IUCN estimated the figures of the endangered species to be around 33 to 39% of all the species living in the world. This essay would further revolve on the aspects of the endangered species and would put forward the environmental effects that these endangered species pose in the society (IUCN 2011; WWF 2011).

Periods of Endangered Species

The extinction of the species dates back to many centuries when the dinosaurs and other such species existed. A Permian extinction is noted down to be dated back to around 250 million years when around 70% of the terrestrial animals along with 96% of the marine animals vanished. Similarly the age of dinosaurs came to an end because of the Cretaceous extinction which took place around 65 million years back. And when the experts analyze the current situation of the world it is seen that a great part of the species still remains endangered and this can create an extinction wave to occur all over again. The number of endangered
