Project Based Learning: 72 Projects for Homeschooling or Classroom

Andreea Pavăl, 2024-08-29 Are you frustrated by traditional curriculums that stifle your child's creativity and fail to engage their curiosity? If you're tired of rigid lesson plans that don't align with your educational philosophy, this curriculum is your solution. Featuring 72 adaptable projects designed for children aged 5-9, this resource allows you to tailor each activity to your child's unique learning level and style. Covering essential subjects like Science, Social Studies, Art, Health, and Nutrition, Technology, and Engineering, Mathematics, Reading, and Language Arts, and Life Skills, it's perfect for both homeschooling and classroom use. Whether you're a homeschooling parent, part of a co-op, or an educator seeking to enrich your classroom, this curriculum provides the tools you need to nurture your child's potential. It's especially suited for families who embrace Montessori, unschooling, or project-based learning, offering the flexibility to align with your unique approach to education.

Caldecott Connections to Science

Shan Glandon, 2000-09-15 Take advantage of the appeal and power of Caldecott award literature to extend and promote learning across the curriculum. In these three volumes, the author demonstrates how to use award-winning books as springboards to science, social studies, learning, and language arts in the library and classroom, and to expand student awareness and appreciation of illustration techniques. For each Caldecott title, there is background information on the illustrations, curriculum connections, lesson plans, and support materials for teaching. Glandon also integrates Gardner's multiple intelligences with curriculum content. With a flexible discovery approach, these activity units focus on student-centered, experiential, holistic, and authentic learning, and they are ready for instant implementation. Targeted to primary grade objectives and abilities, the books include an array of individual projects and collaborative ones. They also foster collaborations between library/media specialists and classroom teachers.

Cognition and Instruction

Sharon M. Carver, David Klahr, 2013-06-17 This volume is based on papers presented at the 30th Carnegie Mellon Symposium on Cognition. This particular symposium was conceived in reference to the 1974 symposium entitled Cognition and Instruction. In the 25 years since that symposium, reciprocal relationships have been forged between psychology and education research and practice and laboratory and classroom learning contexts. Synergistic advances in theories, empirical findings, and instructional practice have been facilitated by the establishment of new interdisciplinary journals, teacher education courses, funding initiatives, and research institutes. So, with all of this activity, where is the field of cognition and instruction? How much progress has been made in 25 years? What remains to be done? This volume proposes and illustrates some exciting and challenging answers to these questions. Chapters in this volume describe advances and challenges in four areas: development and instruction; teachers and instructional strategies; tools for learning from instruction; and social contexts of instruction and learning. Detailed analyses of tasks, subjects' knowledge and processes, and the changes in performance over time have led to new understanding of learners' representations, their use of multiple strategies, and the

important role of metacognitive processes New methods for assessing and tracking the development and elaboration of knowledge structures and processing strategies have yielded new conceptualizations of the process of change Detailed cognitive analysis of expert teachers as well as a direct focus on enhancing teachers cognitive models of learners and use of effective instructional strategies are other areas that have seen tremendous growth and refinement in the past 25 years Similarly the strong impact of curriculum materials and activities based on a thorough cognitive analysis of the task has been extended to the use of technological tools for learning such as intelligent tutors and complex computer based instructional interfaces Both the shift to conducting a significant portion of the cognition and instruction research in real classrooms and the increased collaboration between academics and educators have brought the role of the social context to center stage
