

I-Type Instructions

- The operation is determined by the **opcode**, highlighted in blue. The operands are specified in the three fields *rs*, *rt*, and *imm*.
 - *rs* and *imm* are always used as source operands.
 - *rt* is used as a destination for some instructions (such as *addi* and *lw*) but as another source for others (such as *sw*).
- **Figure 6.9** shows several examples of encoding I-type instructions.
 - Recall that negative immediate values are represented using 16-bit two's complement notation.
 - *rt* is listed first in the assembly language instruction when it is used as a destination, but it is the second register field in the machine language instruction.
