The Welfare of Fish Tore S. Kristiansen, Anders Fernö, Michail A. Pavlidis, Hans van de Vis, 2020-07-01 This book investigates how fish experience their lives their amazing senses and abilities and how human actions impact their quality of life The authors examine the concept of fish welfare and the scientific knowledge behind the inclusion of fish within the moral circle and how this knowledge can change the way we treat fish in the future In many countries fish are already protected by animal welfare legislation in the same way as mammals but in practice there is still a major gap between how we ethically view these groups and how we actually treat them The poor treatment of fish represents a massive animal welfare problem in aquaculture and fisheries both in terms of the number of animals affected and the severity of the welfare issues Thanks to its interdisciplinary scope this thought provoking book appeals to professionals academics and students in the fields of animal welfare cognition and physiology as well as fisheries and aquaculture management **Goldmine** David Brown, 2019-07-23 First published in 1995 this volume uncovered a wealth of low cost good quality material for use in the classroom Author David Brown has been teaching in primary middle and secondary schools for 23 years It was through David s need to resource topics that he uncovered this material Goldmine places these resources into topic areas describes them and tells you where you can get them from Since the first edition in 1985 Goldmine has developed into the country s leading directory of free and sponsored teaching resources providing the wherewithal to obtain over 6000 resources from some 235 suppliers Budget conscious schools will find it saves its purchase price many times over and parents and teachers are safe in the knowledge that all the items described in here are personally recommended by a teacher the compiler himself **Inside**, 1999 *Cortical-Subcortical Loops in Sensory Processing* Max F. K. Happel, Livia de Hoz, Anita Luthi, Julio C. Hechavarría, 2022-02-28 **Illuminating Disease** Marc Zimmer, 2015-01-05 Green fluorescent proteins have been floating in the ocean for more than 160 million years but it took a curious scientist fascinated by pinpricks of green light to begin unlocking their potential Now these jellyfish proteins have become one of the most important tools available to researchers in modern medicine and biology By using them to illuminate other proteins that were previously invisible even under a microscope scientists are now able to observe facets of disease that would have otherwise gone undetected Green fluorescent proteins are used in over three million experiments a year and have proved invaluable for tasks such as tracking HIV breeding bird flu resistant chickens and confirming the existence of cancerous stem cells In *Illuminating Disease* Marc Zimmer introduces us to these revolutionary proteins acquainting readers both with the researchers responsible for the proteins discovery as well as their wide utility The book details the history of genetically modified fluorescent parasites and viruses which provide scientists with lifesaving information about the spread of diseases Green fluorescent proteins allow scientists and doctors to understand diseases better by quite literally illuminating various microscopic interactions occurring in living cells that otherwise would have gone unseen The book is richly illustrated showing the visually striking uses of green

fluorescent proteins and many of these scans have won awards in biological imaging competitions An ideal introduction for students and advanced researchers alike Illuminating Disease is an accessible yet deeply probing investigation into one of the most important developments in medical research of the last several decades **Resources in education** ,1988-02

Making and Growing Elizabeth Hallam,Tim Ingold,2016-05-13 Making and Growing brings together the latest work in the fields of anthropology and material culture studies to explore the differences and the relation between making things and growing things and between things that are made and things that grow Though the former are often regarded as artefacts and the latter as organisms the book calls this distinction into question examining the implications for our understanding of materials design and creativity Grounding their arguments in case studies from different regions and historical periods the contributors to this volume show how making and growing give rise to co produced and mutually modifying organisms and artefacts including human persons They attend to the properties of materials and to the forms of knowledge and sensory experience involved in these processes and explore the dynamics of making and undoing growing and decomposition The book will be of broad interest to scholars in the fields of anthropology archaeology material culture studies history and sociology **Sensorimotor Foundations of Social Cognition** Andreas K. Young,2015-03-05 Our sense of smell pervasively influences our most common behaviors and daily experience yet little is known about olfactory consciousness Over the past decade and a half research in both the fields of Consciousness Studies and Olfaction has blossomed however olfactory consciousness has received little to no attention The olfactory systems unique anatomy functional organization sensory processes and perceptual experiences offers a fecund area for exploring all aspects of consciousness as well as a external perspective for re examining the assumptions of contemporary theories of consciousness It has even been suggested that the olfactory system may represent the minimal neuroanatomy that is required for conscious processing Given the variegated nature of research on consciousness we include original papers concerning the nature of olfactory consciousness The scope of the special edition widely incorporates olfaction as it relates to Consciousness Awareness Attention Phenomenal or Access Consciousness and Qualia Research concerning olfaction and cross modal integration as it relates to conscious experience is also address As the initial foray into this uncharted area of research we include contributions from across all disciplines contributing to cognitive neuroscience including neurobiology neurology psychology philosophy linguistics and computer sciences It is our hope that this Research Topic will serve as the impetus for future interdisciplinary research on olfaction and consciousness **Comprehensive Human Physiology**

Rainer Greger,Uwe Windhorst,2013-11-11 Comprehensive Human Physiology is a significantly important publication on physiology presenting state of the art knowledge about both the molecular mechanisms and the integrative regulation of body functions This is the first time that such a broad range of perspectives on physiology have been combined to provide a

unified overview of the field This groundbreaking two volume set reveals human physiology to be a highly dynamic science rooted in the ever continuing process of learning more about life Each chapter contains a wealth of original data clear illustrations and extensive references making this a valuable and easy to use reference This is the quintessential reference work in the fields of physiology and pathophysiology essential reading for researchers lecturers and advanced students

Harmony-TM Jyoti Swaroop, Geeta Oberoi, Environment Studies book *Digest*, 1896 **Religion and Ecological Crisis** Todd LeVasseur, Anna Peterson, 2016-07-01 In 1967 Lynn White Jr s seminal article The Historical Roots of Our Ecologic Crisis was published essentially establishing the academic study of religion and nature White argues that religions particularly Western Christianity are a major cause of worldwide ecological crises He then asserts that if we are to halt let alone revert anthropogenic damages to the environment we need to radically transform religious cosmologies White s hugely influential thesis has been cited thousands of times in a variety of disciplines including but not limited to religious studies environmental ethics history ecological science philosophy psychology and anthropology In practical terms the ecological crisis to which White was responding has only worsened in the decades since the article was published This collection of original essays by leading scholars in a variety of interdisciplinary settings including religion and nature environmental ethics animal studies ecofeminism restoration ecology and ecotheology considers the impact of White s arguments offering constructive criticism as well as reflections on the ongoing ever changing scholarly debate about the way religion and culture contribute to both environmental crises and to their possible solutions Religion and Ecological Crisis addresses a wide range of topics related to White s thesis including its significance for environmental ethics and philosophy the response from conservative Christians and evangelicals its importance for Asian religious traditions ecofeminist interpretations of the article and which perspectives might have ultimately been left out of his analysis This book is a timely reflection on the legacy and continuing challenge of White s influential article *The Elementary School Library Collection, Phases 1-2-3*, 1994 **Neural Interface with the Peripheral Nervous System** Dominique Durand, 2025-02-14 Neural interfacing represents a riveting journey of scientific curiosity innovation and the relentless pursuit of solutions to some of the most complex challenges in neurology and bioengineering Over the past two decades pioneering studies have significantly propelled the field forward particularly in the realm of peripheral nerves These groundbreaking works have transformed our understanding of how to connect with the nervous system allowing researchers and clinicians to uncover new therapeutic possibilities Exploring peripheral nerve recording selectivity alongside multiple contact nerve electrodes has brought unprecedented precision enabling targeted treatments that minimize side effects and hold immense potential for both therapeutic interventions and diagnostics The efforts continue to refine these technologies with the aim to reduce the mechanical and biological footprint of electrodes within the nervous system and the ultimate vision is to develop neural interfaces that seamlessly integrate with both peripheral and central nervous systems for several years enhancing the quality

of life for individuals affected by neurological conditions This book highlights the remarkable progress in neural interfacing from theoretical models to intricate designs of long term implantable electrodes It provides foundational knowledge and cutting edge solutions for future breakthroughs in neuroprosthetics neuromodulation and the treatment of neurological disorders It discusses pioneering research that laid the groundwork for predicting nerve fiber responses to electrical stimuli It reviews the early models that forecast axonal excitation that simplified the complex computational process making neural interface design more practical and scalable It analyzes innovations such as slowly penetrating interfascicular electrodes and spiral nerve cuff electrodes that significantly enhance precision and stability in neural recordings minimizing tissue damage and expanding applications in prosthetics and sensory restoration The book also covers key advancements in chronic neural interfaces and functional electrical stimulation that allow for fine tuned muscle activation and novel neuromodulation treatments and analyzes closed loop stimulation systems that utilize spontaneous nerve activity as feedback It explores peripheral nerve recording selectivity that further boosts targeted therapeutic interventions and diagnostics offering promising solutions for future neuroprosthetic devices The book is a comprehensive resource that traces the evolution of nerve stimulation and recording technologies and is a testament to the collaboration ingenuity and perseverance of scientists engineers and clinicians dedicated to pushing the boundaries of what is possible

The American Elevator and Grain Trade, 1919

Evolution of the First Nervous Systems Peter A.V. Anderson, 2013-11-11 This book represents the proceedings of a NATO Advanced Research Workshop of the same name held at St Andrews University Scotland in July of 1989 It was the first meeting of its kind and was convened as a forum to review and discuss the phylogeny of some of the cell biological functions that underlie nervous system function such matters as intercellular communication in diverse lower organisms and the electrical excitability of protozoans and cnidarians to mention but two The rationale behind such work has not necessarily been to understand how the first nervous systems evolved many of the animals in question provide excellent opportunities for examining general questions that are unapproachable in the more complex nervous systems of higher animals Nevertheless a curiosity about nervous system evolution has invariably pervaded much of the work The return on this effort has been mixed depending to a large extent on the usefulness of the preparation under examination For example work on cnidarians to many the keystone phylum in nervous system evolution simply because they possess the first nervous systems lagged behind that carried out on protozoans because the latter are large single cells and thus far more amenable to microelectrode based recording techniques Furthermore protozoans can be cultured easily and are more amenable to genetic and molecular analyses
