Select Subcommittee on Education,1972 **Structural Dynamics in Uncertain Environments** Subrat Kumar Jena,S. Chakraverty,2024-12-09 The

uncertainties or randomness of the material properties of structural components are of serious concern to engineers Structural analysis is usually done by taking into account only deterministic or crisp parameters however building materials can have the aspects of uncertainty The causes of this uncertainty or randomness are defects in atomic configurations measurement errors environmental conditions and other factors The influence of uncertainties is more profound for nanoscale and microstructures due to their small scale effects Several nanoscale experiments and molecular dynamics studies also support the claim of possible attachment of randomness for various parameters With regard to these concerns it is necessary to propose new models that specifically integrate and effectively overcome imprecisely defined parameters of the system Structural Dynamics in Uncertain Environments presents the uncertainty modeling of nanobeams microbeams

and Functionally Graded FG beams using non probabilistic approaches which include interval and fuzzy concepts Vibration and stability analyses of the beams are conducted using different analytical semi analytical and numerical methods for finding exact and or approximate solutions of governing equations arising in uncertain environments In this context this book addresses structural uncertainties and investigates the dynamic behavior of micro nano and FG beams Examines the concepts of fuzzy uncertain environments in structural dynamics Presents comprehensive analysis of propagation of uncertainty in vibration and buckling analyses Explains efficient mathematical methods to handle uncertainties in the governing equations
