Learn cloud-native application basics to understand what parts of your organization's Java-based applications and platforms need to migrate and modernize. Understand how enterprise Java specifications can help you transition projects and teams. Build a cloud-native platform that supports effective development without falling into buzzword traps. Find a starting point for your migration projects by identifying candidates and staging them through modernization steps. Discover how to complement a traditional enterprise Java application with components on top of containers and Kubernetes.

**Java Enterprise Best Practices** Robert Eckstein, 2002. Crammed with tips and tricks, *Java Enterprise Best Practices* distills years of solid experience from eleven experts in the J2EE environment into a practical, to-the-point guide to J2EE. *Java Enterprise Best Practices* gives developers the unvarnished, expert-tested advice that the man pages don't provide: what areas of the APIs should be used frequently and which are better avoided; elegant solutions to problems you face that other developers have already discovered; what things you should always do; what things you should consider doing; and what things you should never do, even if the documentation says it's OK.

*Continuous Enterprise Development in Java* Andrew Lee Rubinger, Aslak Knutsen, 2014-03-12. Learn a use case approach for developing Java enterprise applications in a continuously test-driven fashion. With this hands-on guide, authors and JBoss project leaders Andrew Lee Rubinger and Aslak Knutsen show you how to build high-level components from persistent storage to the user interface using the Arquillian testing platform and several other JBoss projects and tools. Through the course of the book, you'll build a production-ready software conference tracker called GeekSeek using source code from GitHub. Rubinger and Knutsen demonstrate why testing is the very foundation of development, essential for ensuring that code is consumable, complete, and correct. Bootstrap an elementary Java EE project from start to finish before diving into the full example application, GeekSeek. Use both relational and NoSQL storage models to build and test GeekSeek's data persistence layers. Tackle testable business logic development and asynchronous messaging with an SMTP service. Expose enterprise services as a RESTful interface using Java EE's JAX-RS framework. Implement OAuth authentication with JBoss's PicketLink identity management service. Validate the UI by automating interaction in the browser and reading the rendered page. Perform full-scale integration testing on the final deployable archive.
