Critical Information Infrastructures Maitland Hyslop,2007-09-05 Resilience is an increasingly important concept and quality in today s world It is particularly important in the area of Critical Infrastructures It is crucial in the area of Critical Information Infrastructure This is because since the year 2000 man has been dependent on information and telecommunications systems for survival particularly in the Organization for Economic Cooperation and Development OECD countries and because all other Critical Inf structures depend upon to a greater or lesser extent Critical Information 1 2 Infrastructure Until probably the late 1980s it would be fair to say that the defense of individual nation states depended upon a mixture of political will and armed might The fall of

the Berlin Wall may have effectively ended the Cold War and with it a bipolar world but it brought globalization and a multipolar digital world in its wake Simply put a number of power vacuums were created and these have yet to be fully filled and settled In this New World many changes were afoot These changes include the increasing irrelevance of nation states in federated structures and the export of democracy on the back of globalization One of the biggest changes though is the use of digital technology by the OECD countries This is on such a scale that these countries have become both dependent upon information technology and as individual states largely irrelevant to the new global electronic economy 1 This adaptation of Maslow's hierarchy of needs is attributed to KPMG

Dictionary of XML Technologies and the Semantic Web Vladimir Geroimenko, 2012-12-06 The emerging Second Generation Web is based entirely on XML and related technologies It is intended to result in the creation of the Semantic Web on which computers will be able to deal with the meaning semantics of Web data and hence to process them in a more effective and autonomous way This new version of the Web introduces a multitude of novel concepts terms and acronyms Purpose Scope and Methods This dictionary is an effort to specify the terminological basis of emerging XML and Semantic Web technologies The ultimate goal of this dictionary is even broader than just to define the meaning of new words it aims to develop a proper understanding of these leading edge technologies To achieve this comprehensible definitions of technical terms are supported by numerous diagrams and code snippets clearly annotated and explained The main areas covered in this dictionary are 1 XML syntax and core technologies such as Namespaces Infoset and XML Schema 2 all the major members of the XML family of technologies such as XSLT XPath and XLink 3 numerous XML based domain specific languages such as NewsML News Markup Language 4 the concept and architecture of the Semantic Web 5 key Semantic Web technologies such as RDF Resource Description Framework RDF Schema and OWL Web Ontology Language and 6 Web services including WSDL Web Services Description Language and SOAP Simple Object Access Protocol
