Abstract *Background:* The purpose of this study was to determine the prevalence of self-reported depression among a representative sample of the adult population of the United States. *Methods:* Data were obtained from the 1996 National Health and Medical Examination Survey, a nationally representative sample of the civilian, noninstitutionalized population of the United States. *Results:* The prevalence of self-reported depression was 10.1% among the adult population. The prevalence was higher among females than males, and among those with lower education and income. *Conclusions:* The prevalence of self-reported depression is high among the adult population of the United States. The prevalence is higher among females than males, and among those with lower education and income.
