Cell-Cell Channels František Baluška, Dieter Volkmann, Peter W. Barlow, 2007-08-10

The biological sciences are dominated by the idea that cells are the functionally autonomous physically separated discrete units of life. This concept was propounded in the 19th century by discoveries of the cellular structuring of both plants and animals. Moreover, the apparent autonomy of unicellular eukaryotes as well as the cellular basis of the mammalian brain, an organ whose anatomy for a long while defied attempts to validate the idea of the cellular nature of its neurons, seemed to provide the final conclusive evidence for the completeness of cell theory, a theory which has persisted in an almost dogmatic form up to the present day. However, it is very obvious that there are numerous observations which indicate that it is not the cells which serve as the basic units of biological life but that this property falls to some other subcellular assemblage. To deal with this intricate problem concerning the fundamental unit of living matter, we proposed the so-called Cell Body concept which in fact develops an exceedingly original idea proposed by Julius Sachs at the end of the 19th century. In the case of eukaryotic cells, DNA-enriched nuclei are intimately associated with a microtubular cytoskeleton. In this configuration, as a Cell Body, these two items comprise the fundamental functional and structural unit of eukaryotic living matter. The Cell Body seems to be inherent to all cells in all organisms.

The design of each chapter serves to deepen fundamental knowledge while showcasing the latest advances and technology that shape our understanding of cells. This perspective emphasizes the central concepts that underpin modern cell biology. The chapters will explain cellular structures and functions, including those of organelles, the cytoskeleton, and cell membranes. This acknowledges the interdisciplinary nature of cell biology and includes contributions from biochemistry, molecular biology, genetics, and systems biology. We aim to provide an integrated perspective, highlighting the interconnectedness of biological systems through the convergence of these domains. This book is intended for a diversified audience, including students and researchers in biological sciences, medical professionals, and non-specialists interested in the science of life and disease. Fascination with cell biology: you learn about the processes and interactions with cells within tissues and organisms that lead to the processes of the study of the subject helps us in the advancement in the field of medicine by producing more and more medicines in cell medicine and cell
