

# Using Transformations to Graph Quadratic Functions

## Reflections

### Reflection Across $y$ -axis

Input values change.

$$f(x) = x^2$$

$$f(-x) = (-x)^2 = x^2$$

The function  $f(x) = x^2$  is its own reflection across the  $y$ -axis.

### Reflection Across $x$ -axis

Output values change.

$$f(x) = x^2$$

$$-f(x) = -(x^2)$$

$$= -x^2$$

The function is flipped across the  $x$ -axis.

## Stretches and Compressions

### Horizontal Stretch/Compression by a Factor of $|b|$

Input values change.

$$f(x) = x^2$$

$$f\left(\frac{1}{b}x\right) = \left(\frac{1}{b}x\right)^2$$

$|b| > 1$  stretches away from the  $y$ -axis.  
 $0 < |b| < 1$  compresses toward the  $y$ -axis.

### Vertical Stretch/Compression by a Factor of $|a|$

Output values change.

$$f(x) = x^2$$

$$a \cdot f(x) = ax^2$$

$|a| > 1$  stretches away from the  $x$ -axis.  
 $0 < |a| < 1$  compresses toward the  $x$ -axis.

**Algebra 1, Grades 8-12 Notetaking Guide** Holt McDougal, 2003      **Harmonic Analysis on Symmetric Spaces and Applications II** Audrey Terras, 2012-12-06 Well finally here it is the long promised Revenge of the Higher Rank Symmetric Spaces and Their Fundamental Domains When I began work on it in 1977 I would probably have stopped immediately if someone had told me that ten years would pass before I would declare it finished Yes I am declaring it finished though certainly not perfected There is a large amount of work going on at the moment as the piles of preprints reach the ceiling Nevertheless it is summer and the ocean calls So I am not going to spend another ten years revising and polishing But gentle reader do send me your corrections and even your preprints Thanks to your work there is an Appendix at the end of this volume with corrections to Volume I I said it all in the Preface to Volume I So I will try not to repeat myself here Yes the recent trends mentioned in that Preface are still just as recent      Number Theory, Analysis and Geometry Dorian Goldfeld, Jay Jorgenson, Peter Jones, Dinakar Ramakrishnan, Kenneth Ribet, John Tate, 2011-12-20 In honor of Serge Lang's vast contribution to mathematics this memorial volume presents articles by prominent mathematicians Reflecting the breadth of Lang's own interests and accomplishments these essays span the field of Number Theory Analysis and Geometry

Quasiconformal Teichmüller Theory Frederick P. Gardiner, Nikola Lakic, 2000 The Teichmüller space  $T(X)$  is the space of marked conformal structures on a given quasiconformal surface  $X$  This volume uses quasiconformal mapping to give a unified and up to date treatment of  $T(X)$  Emphasis is placed on parts of the theory applicable to noncompact surfaces and to surfaces possibly of infinite analytic type The book provides a treatment of deformations of complex structures on infinite Riemann surfaces and gives background for further research in many areas These include applications to fractal geometry to three dimensional manifolds through its relationship to Kleinian groups and to one dimensional dynamics through its relationship to quasisymmetric mappings Many research problems in the application of function theory to geometry and dynamics are suggested      The Mathematical Legacy of Wilhelm Magnus: Groups, Geometry and Special Functions William Abikoff, Joan S. Birman, Kathryn Kuiken, 1994 Wilhelm Magnus was an extraordinarily creative mathematician who made fundamental contributions to diverse areas including group theory geometry and special functions This book contains the proceedings of a conference held in May 1992 at Polytechnic University Brooklyn to honour the memory of Magnus The focus of the book is on active areas of research where Magnus influence can be seen The papers range from expository articles to major new research bringing together seemingly diverse topics and providing entry points to a variety of areas of mathematics

**Harmonic Analysis on Symmetric Spaces—Higher Rank Spaces, Positive Definite Matrix Space and Generalizations** Audrey Terras, 2016-04-26 This text is an introduction to harmonic analysis on symmetric spaces focusing on advanced topics such as higher rank spaces positive definite matrix space and generalizations It is intended for beginning graduate students in mathematics or researchers in physics or engineering As with the introductory book entitled Harmonic

Analysis on Symmetric Spaces Euclidean Space the Sphere and the Poincar Upper Half Plane the style is informal with an emphasis on motivation concrete examples history and applications The symmetric spaces considered here are quotients  $X = G/K$  where  $G$  is a non compact real Lie group such as the general linear group  $GL_n(\mathbb{R})$  of all  $n \times n$  non singular real matrices and  $K$  is the maximal compact subgroup of orthogonal matrices Other examples are Siegel's upper half plane and the quaternionic upper half plane In the case of the general linear group one can identify  $X$  with the space  $P_n$  of  $n \times n$  positive definite symmetric matrices Many corrections and updates have been incorporated in this new edition Updates include discussions of random matrix theory and quantum chaos as well as recent research on modular forms and their corresponding L functions in higher rank Many applications have been added such as the solution of the heat equation on  $P_n$  the central limit theorem of Donald St P Richards for  $P_n$  results on densest lattice packing of spheres in Euclidean space and  $GL_n$  analogs of the Weyl law for eigenvalues of the Laplacian in plane domains Topics featured throughout the text include inversion formulas for Fourier transforms central limit theorems fundamental domains in  $X$  for discrete groups such as the modular group  $GL_n(\mathbb{Z})$  of  $n \times n$  matrices with integer entries and determinant 1 connections with the problem of finding densest lattice packings of spheres in Euclidean space automorphic forms Hecke operators L functions and the Selberg trace formula and its applications in spectral theory as well as number theory *Algebra* Holt, Rinehart and Winston Staff, 1997

Bridson, Daniel Groves, 2010-01-15 The authors prove that if  $F$  is a finitely generated free group and  $\phi$  is an automorphism of  $F$  then  $F \rtimes_{\phi} \mathbb{Z}$  satisfies a quadratic isoperimetric inequality The authors proof of this theorem rests on a direct study of the geometry of van Kampen diagrams over the natural presentations of free by cyclic groups The main focus of this study is on the dynamics of the time flow of  $t$  corridors where  $t$  is the generator of the  $\mathbb{Z}$  factor in  $F \rtimes_{\phi} \mathbb{Z}$  and a  $t$  corridor is a chain of 2 cells extending across a van Kampen diagram with adjacent 2 cells abutting along an edge labelled  $t$  The authors prove that the length of  $t$  corridors in any least area diagram is bounded by a constant times the perimeter of the diagram where the constant depends only on  $\phi$  The authors proof that such a constant exists involves a detailed analysis of the ways in which the length of a word  $w$  in  $F$  can grow and shrink as one replaces  $w$  by a sequence of words  $w_m$  where  $w_m$  is obtained from  $\phi(w)$  by various cancellation processes In order to make this analysis feasible the authors develop a refinement of the improved relative train track technology due to Bestvina Feighn and Handel *Algebra 1* Holt Rinehart & Winston, 2001 **Remote Techniques for Nuclear Plant**, 1993 This volume covers the practical application of remote technology to all types of nuclear plant both experimental and commercial

It concentrates on the remote inspection refurbishment and decommissioning of reactor pressure vessels reactor internal components primary circuits boiler and steam generators PIE and fuel routes reprocessing plant and radioactive waste storage The emphasis is on equipment currently in use and it also covers equipment under consideration and development Consisting of 44 papers these proceedings draw on the experience of nuclear engineers from around the world to form a substantial reference work on remote techniques for the inspection and refurbishment of nuclear plant **Host**
