book isn't like that. Not only is it short but it is easy to comprehend. Eric Sentell also states in the very beginning that this book is for those who are busy and need a straight forward explanation. I am a college student and I don't have time to scour the internet for an explanation of how to write the essay that I waited until the last minute to write. Don't pretend you haven't done it. This book is easy to read and comprehend, short and cheap. It is totally worth the money. My only complaint is that I didn't have this earlier in my college journey. Sherry Peppers. As a homeschool mom of 4 I would highly recommend this book to anyone who wants to understand the basics of writing as well as to anyone who wants to improve their writing. The book covers a broad range of writing topics that help in understanding who you're writing to, how to develop a paragraph and how to make your paragraph more interesting and concise. Most of the paragraphs are short which helps the reader understand and retain the information better. I also liked the use of bullet points. It made the material direct, concise and easier to learn. I personally learned different writing tricks with this book and I gained a better understanding of basic concepts and writing techniques that I had heard over and over in traditional English books but never fully grasped before. Good writing still takes time and practice but this book helps lay a good foundation of how to get started and how to develop skills to improve your writing. Lisa Reavey. This was excellent for me. I felt like it created a simple, direct way to write professionally. Would definitely recommend. Kristin McKinnis.

[How to Write Better Medical Papers](#) Michael Hanna, 2019-03-20. This book guides medical researchers through all stages of transforming their scientific data and ideas into a published paper. Many researchers in medicine, including the life sciences and health sciences, struggle to get their research written and published. Manuscripts are typically rejected and/or sent back for revisions several times before ever being published. One reason for this is that researchers have not received much instruction in the specific subjects and skills needed to write and publish scientific medical papers: research methodology, ethics, statistics, data visualization, writing, revising and the practicalities of publishing. Instead of wasting the reader's time discussing trivialities of punctuation, spelling, etc., this book tackles all the major scientific issues that routinely lead to manuscripts getting rejected from the journals. The section Preparing covers the range of methodological, ethical and practical aspects that researchers need to address before starting to write their paper. The section Analyzing reviews

commonplace problems in the statistical analysis and presentation and how to resolve those problems The section Drafting describes what to write in all the various parts of a paper the Introduction Methods Results Discussion Abstract etc The section Revising explains and illustrates how to improve the writing style of any manuscript The section Publishing discusses how to navigate the peer review process and all other practical aspects of the publishing phase This book draws on the author's decade of experience as an independent medical writer and research consultant but it is not written merely as the personal opinion of yet another expert The entire book is grounded in the existing scientific and scholarly literature with extensive references and a lengthy annotated bibliography so readers can quickly obtain more information on any aspect they want Thus this book provides a more evidence based scholarly account of how medical scientific papers should be written in order to improve medical communication and accelerate scientific progress After reading this entire book cover to cover medical researchers will know how to write better quality medical papers and they will be able to publish their work in better journals with less time and struggle This book is essential reading for anyone conducting research in clinical medicine life sciences or health sciences
