with mean allocation time of 12 microseconds It was observed that 94.4% of the time clients requests were fulfilled successfully after borrowing the resources from cloud network An average of 100% results were collected for protecting multiple clouds from same attack by sharing the attacks and intruders information among clouds in different situations It is therefore concluded that cross cloud communication framework can benefit for sharing of resources and attacks information among clouds for efficient resource management and allocation and protection against same attacks at different clouds
