Preference, Choice, and Order Steven Brams, William V. Gehrlein, Fred S. Roberts, 2009-02-11 Peter Fishburn has had a splendidly productive career that led to path-breaking contributions in a remarkable variety of areas of research. His contributions have been published in a vast literature ranging through journals of social choice and welfare, decision theory, operations research, economic theory, political science, mathematical psychology, and discrete mathematics. This work was done both on an individual basis and with a very long list of coauthors. The contributions that Fishburn made can roughly be divided into three major topical areas, and contributions to each of these areas are identified by sections of this monograph. Section 1 deals with topics that are included in the general areas of utility, preference, individual choice, subjective probability, and measurement theory. Section 2 covers social choice theory, voting models, and social welfare. Section 3 deals with more purely mathematical topics that are related to combinatorics, graph theory, and ordered sets. The common theme of Fishburn's contributions to all of these areas is his ability to bring rigorous mathematical analysis to bear on a wide range of difficult problems. **Trademark Protection and Practice** Jerome Gilson, 2005

Grivaux, É. Matheron, Q. Menet, 2021-06-21 We solve a number of questions pertaining to the dynamics of linear operators on Hilbert spaces sometimes by using Baire category arguments and sometimes by constructing explicit examples In particular we prove the following results i A typical hypercyclic operator is not topologically mixing has no eigen values and admits no non trivial invariant measure but is densely distributionally chaotic ii A typical upper triangular operator with coefficients of modulus 1 on the diagonal is ergodic in the Gaussian sense whereas a typical operator of the form diagonal with coefficients of modulus 1 on the diagonal plus backward unilateral weighted shift is ergodic but has only countably many unimodular eigenvalues in particular it is ergodic but not ergodic in the Gaussian sense iii There exist Hilbert space operators which are chaotic and U frequently hypercyclic but not frequently hypercyclic Hilbert space operators which are chaotic and frequently hypercyclic but not ergodic and Hilbert space operators which are chaotic and topologically mixing but not U frequently hypercyclic We complement our results by investigating the descriptive complexity of some natural classes of operators defined by dynamical properties **Readings in Artificial Intelligence** Bonnie Lynn Webber, Nils J.
