## **Lesson Plan About Water For Preschoolers:**

**Planning for Play, Observation, and Learning in Preschool and Kindergarten** Gaye Gronlund, 2012-11-16 Play is an important vehicle for learning in the early years. With intentional planning frameworks, this resource provides teachers with tools and strategies to organize and develop curriculum around high-level, purposeful play. Practical application techniques help teachers create a cycle of planning and observation as they use a play-based curriculum to help young children thrive in the classroom. Gaye Gronlund is an early childhood education consultant who trains early childhood educators across the country. She is the author of six books: [Investigating Water With Young Children \(Ages 3-8\)](#) Beth Dykstra Van Meeteren, 2023. Water is a meaningful context for children to engage in inquiry and acquire and use science and engineering practices such as developing spatial thinking and early concepts of water dynamics. This book shows teachers how to engage children with opportunities to engineer water movement through pouring and filling containers of various kinds and shapes, observing how water interacts with surfaces in large and small amounts, exploring how water can be moved and using water to move objects. These experiences build a foundation that will support children's more complex study of this phenomena in later schooling as well as encourage interest in STEM fields. The text provides guidance for arranging the physical, intellectual, social, emotional, and promotional environments of the early childhood classroom for integrating literacy learning and for building essential partnerships with administrators and families to enhance STEM learning for our youngest learners. **Book Features:** Introduces WaterWorks, an integrative STEM experience developed by young children, their teachers, and early childhood researchers. Describes an approach that engages children in doing science and engineering rather than teaching children about these fields. Offers children the opportunity to engage in STEM experiences every day in their classrooms alongside literacy learning. Illustrates ways to plan and use over ten types of engineering experiences appropriate for children ages 3-8. Includes guidance for documenting children's learning over time. Aligns to the Early Learning Outcomes Framework and the Next Generation Science Standards. **Contributors:** Allison Barnes, Shelly L. Counsell, Lawrence Escalada, Judith Finkelstein, Linda Fitzgerald, Sherri Peterson, Jull Uhlenberg, and Wendy Miller. **Praise for the STEM for Our Youngest Learners Series:** This series is an important addition to a very limited field of guides for teaching STEM to young learners. While activity books abound, this series, with its basis in constructivism and its use of an inquiry-based teaching model, guides teachers in creating in-depth experiences for children to examine the natural world while building their critical thinking skills and deepening their curiosity about and interest in the world around them. Karen Worth, consultant in science education, early childhood and elementary years. **Nature-Based Learning for Young Children** Julie Powers, Sheila Williams Ridge, 2018-12-11.
