## Eleven Stirling Engine Projects :

**Eleven Stirling Engine Projects You Can Build** Jim B. Larsen, Jim R. Larsen, 2012 Presents eleven projects demonstrating how to build simple fun and educational Stirling engines from available kits      **Quick and Easy Stirling Engine** Jim R. Larsen, 2011-09 Do you know how to make a working engine from soda cans You do now The Quick and Easy Stirling Engine book will show you every detail you need to know There are no difficult secrets and no expensive parts to buy With two soda cans and a few other materials you can build a running engine in just a few hours The engine featured in this book was designed for use in educational settings Consulting with several educators this engine was designed so that it could be assembled with simple hand tools by most builders in about three hours The parts list is simple and affordable Simple hand tools are all that is required for assembling this engine Once assembled the engine will spin a flywheel when the bottom is heated and ice is placed on top This is a hot air engine design sometimes referred to as a Stirling Engine The engine makes motion by exercising a temperature differential The bottom half of the engine must be warmed to about 250 degrees F and the top of the engine must be cooled with cold water or ice When these conditions are present the engine will spin between 100 and 200 rpm The primary components of this engine are soda cans copper wire and an old CD The adhesive that is used for construction is readily available at hardware stores This engine is a fun project for students home builders hobbyists and anyone who wants to learn how to make their own hot air engine from soda cans      *Energy Research and Development Projects in the Nordic Countries* ,1988 NEK rapport 1988 3      *Automotive Stirling Engine Development Project* William D. Ernst, Richard K. Shaltens, 1997 The objectives of the Automotive Stirling Engine ASE Development project were to transfer European Stirling engine technology to the United States and develop an ASE that would demonstrate a 30% improvement in combined metro highway fuel economy over a comparable spark ignition SI engine in the same production vehicle In addition the ASE should demonstrate the potential for reduced emissions levels while maintaining the performance characteristics of SI engines Mechanical Technology Incorporated MTI developed the ASE in an evolutionary manner starting with the test and evaluation of an existing stationary Stirling engine and proceeding through two experimental engine designs the Mod I and the Mod II Engine technology development resulted in elimination of strategic materials increased power density higher temperature and efficiency operation reduced system complexity long life seals and low cost manufacturing designs Mod II engine dynamometer tests demonstrated that the engine system configuration had accomplished its performance goals for power 60 kW and efficiency 38.5% to within a few percent Tests with the Mod II installed in a delivery van demonstrated a combined fuel economy improvement consistent with engine performance goals and the potential for low emissions levels A modified version of the Mod II was identified as a manufacturable ASE design for commercial production In conjunction with engine technology development technology transfer proceeded through two ancillary efforts the Industry Test and Evaluation Program ITEP and the NASA Technology Utilization TU project The ITEP served to introduce Stirling technology to industry

and the TU project provided vehicle field demonstrations for thirdparty evaluation in everyday use and accomplished more than 3100 hr and 8 000 miles of field operation To extend technology transfer beyond the ASE project a Space Act Agreement between MTI and NASA Lewis Research Center allowed utilization of project resources for additional development work and emissions testing as part of an industry funded Stirling Natural Gas Engine program *Energy Research and Development Projects in the Nordic Countries.
