Guido Van Rossum

Language Reference Manual:

The Python Language Reference Manual Guido Van Rossum, Fred L. Jr. Drake, 2011-03-01 This is a printed edition of the official Python language reference manual from the Python 3.2 distribution. It describes the syntax of Python 3 and its built-in datatypes and operators. Python is an interpreted object-oriented programming language suitable for rapid application development and scripting. This manual is intended for advanced users who need a complete description of the Python 3 language syntax and object system. A simpler tutorial suitable for new users of Python is available in the companion volume *An Introduction to Python* for Python version 3.2. ISBN 978-1-906966-13-3. For each copy of this manual sold, USD 1 is donated to the Python Software Foundation by the publisher Network Theory Ltd. [Perl Language Reference Manual](#) Larry Wall, and others, 2010. This manual is a printed edition of the official Perl reference documentation from the Perl 5.12.1 distribution. It describes the syntax of Perl and its built-in datatypes, operators, functions, variables, regular expressions, and error messages. For each copy of this manual sold, the publisher Network Theory Ltd. will donate 1 USD to The Perl Foundation to support the further development of the language. Further topics are covered in the *Perl Library Reference Manual*, *Volumes 1-6*, the *Perl C API and Internals Manual*, and the *Perl Unicode and Locales Manual*, available separately.

Maple V Language Reference Manual Bruce W. Char, Keith O. Geddes, Gaston H. Gonnet, Benton L. Leong, Michael B. Monagan, Stephen M. Watt, 2012-12-06. The design and implementation of the Maple system is an ongoing project of the Symbolic Computation Group at the University of Waterloo in Ontario, Canada. This manual corresponds with version V (roman numeral five) of the Maple system. The online help subsystem can be invoked from within a Maple session to view documentation on specific topics. In particular, the command `updates` points the user to documentation updates for each new version of Maple. The Maple project was first conceived in the autumn of 1980, growing out of discussions on the state of symbolic computation at the University of Waterloo. The authors wish to acknowledge many fruitful discussions with colleagues at the University of Waterloo, particularly Morven Gentleman, Michael Malcolm, and Frank Tompa. It was recognized in these discussions that none of the locally available systems for symbolic computation provided the facilities that should be expected for symbolic computation in modern computing environments. We concluded that since the basic design decisions for the then-current symbolic systems such as ALTRAN, CAMAL, REDUCE, and to design a new system MACSYMA were based on 1960s computing technology, it would be wise from scratch, taking advantage of the software engineering technology which had become available since then, as well as drawing from the lessons of experience. Maple's basic features, e.g., elementary data structures, input/output, arithmetic with numbers, and elementary simplification, are coded in a systems programming language for efficiency. **Python Language Reference Manual** Guido Van Rossum, 2003.
