Full-Size Ford Restoration: 1960-1964 Collin Kleer, 2017-08-15 Ford's full size model change from 1959 to 1960 was seen as a big departure from the swerving lines of the 1950s. Slow to start on sales, Ford's full size production grew year after year, peaking with 648,010 units produced in 1963. It was an all time best for the Galaxie line and its sister nameplates. Eight appearance and performance offerings were applied to the full size Ford line including the Fairlane, Galaxie, Ranch Wagon, Country Sedan, Country Squire, Courier 300 and Custom, which made each car unique. With more than 2.3 million full size Fords produced from 1960 to 1964, a restoration book for these cars has been desperately needed and here it is. Author Colin Kleer, president of Pennsylvania's Three Rivers chapter of the Galaxie Club, puts his decades of experience restoring these cars into this single volume. Featuring step by step procedures on body, driveline, chassis and interior components, Kleer shows with more than 400 photos and text how to restore a full size Ford to its former glory. Crucial projects such as rust repair and driveline maintenance help guarantee that your Ford will be sound and solid for years to come after the restoration. The Galaxie and its full size stablemates continue to be a strong force at car shows and in the marketplace; they create an even deeper following for these cars. Adding a detailed restoration book to the full size restorers arsenal will surely aid in bringing more of these Fords back to life and back on the road. **Motor Cycling and Motoring**, 1970-07

A valuable backdrop to the events is provided throughout the book by ex Rootes employees and management. Chronicles the Rootes Group's efforts to survive as a major car and truck manufacturer in Britain's turbulent 1960s and 1970s. From a position as a respected global name in manufacturing, the Rootes Group found itself struggling to compete in a new buyers market in which foreign competition was starting to overtake British manufacturers. Despite the challenges that confronted them, Rootes designed and built some of the most popular cars of the period: the Hillman Minx and Super Minx, the Singer Vogue and the Humber Sceptre and the iconic but ill fated Hillman Imp, as well as some of the most rugged and well purposed vans and trucks built by Commer, Karrier and Dodge. The book highlights the competition pedigree of the Sunbeam Rapier, the Alpine, the Imp and the Ford V8 engined Tiger. Famous names such as Paddy Hopkirk, Rosemary Smith and Peter Procter all give their stories as works drivers for Rootes, while engineers at Comps tell the background stories of how races and rallies were won and lost. Andrew Cowan, Rootes works rally driver and winner of the 1968 London Sydney Marathon in a

Hillman Hunter shares his story in what was a remarkable and unexpected victory for Rootes. This complex story is told through the eyes of ex Rootes and Chrysler personnel giving from the horse's mouth accounts of the company and its exploits. Geoff Carverhill takes you inside the boardroom into the drawing office and on to the production line to give the reader an insider's view of Rootes, Chrysler and Peugeot.

Assessment of Fuel Economy Technologies for Light-Duty Vehicles
National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Light-Duty Vehicle Fuel Economy, 2011-07-03. Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport utility vehicles, minivans and other light duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark ignition gasoline, compression ignition diesel and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark ignition engines could reduce fuel consumption by 29 percent at an additional cost of 2,200 to the consumer. Replacing spark ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately 5,900 per vehicle and replacing spark ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of 6,000 per vehicle. The book focuses on fuel consumption, the amount of fuel consumed in a given driving distance, because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
