Tools for High Performance Computing 2015

Andreas Knüpfer,Tobias Hilbrich,Christoph Niethammer,José Gracia,Wolfgang E. Nagel,Michael M. Resch,2016-07-27 High

Performance Computing HPC remains a driver that offers huge potentials and benefits for science and society. However, a profound understanding of the computational matters and specialized software is needed to arrive at effective and efficient simulations. Dedicated software tools are important parts of the HPC software landscape and support application developers. Even though a tool is by definition not a part of an application but rather a supplemental piece of software, it can make a fundamental difference during the development of an application. Such tools aid application developers in the context of debugging, performance analysis, and code optimization and therefore make a major contribution to the development of robust and efficient parallel software. This book introduces a selection of the tools presented and discussed at the 9th International Parallel Tools Workshop held in Dresden, Germany, September 2-3, 2015, which offered an established forum for discussing the latest advances in parallel tools.
