Human Factors In Augmented Reality Environments:

Human Factors in Augmented Reality Environments Weidong Huang, Leila Alem, Mark A Livingston, 2012-09-19
Advances in hardware and networking have made possible a wide use of augmented reality AR technologies. However, simply putting those hardware and technologies together does not make a good system for end users to use. New design principles and evaluation methods specific to this emerging area are urgently needed to keep up with the advance in technologies. *Human Factors in Augmented Reality Environments* is the first book on human factors in AR, addressing issues related to design, development, evaluation, and application of AR systems. Topics include surveys, case studies, evaluation methods, and metrics; HCI theories and design principles; human factors and lessons learned; and experience obtained from developing, deploying, or evaluating AR systems. The contributors for this cutting edge volume are well established researchers from diverse disciplines including psychologists, artists, engineers, and scientists. *Human Factors in Augmented Reality Environments* is designed for a professional audience composed of practitioners and researchers working in the field of AR and human computer interaction. Advanced level students in computer science and engineering will also find this book useful as a secondary text or reference.
