Lexical Knowledge in the Organization of Language Urs Egli, Peter E. Pause, Christoph Schwarze, Arnim von Stechow, Götz Wienold, 1995-03-09 This book contains a selection of the papers given at an international conference at the University of Konstanz Germany in 1991 All contributions relate to the assumption that lexical knowledge plays a central role in the organization of language inasmuch as the components or modules of grammar come together and interact in the lexicon Originating in various traditions of linguistic thought however the individual papers reflect differing interests and are based upon different conceptions of the lexicon its status and interfaces There is the position of current generative linguistics which aims at accounting for structural properties of the lexicon within syntactic theory There is also the perspective of model theoretical semantics where borderline phenomena between lexical semantics and the semantics of sentence and text receive

particular attention Still another group of papers directly discusses problems of lexical semantics focussing on representational and conceptual aspects of word meanings The notion of a two level semantics as well as cross linguistic analyses are characteristic of these contributions The book closes with a comparative and historical study of lexical evolution
