

Brake Controls, Functions, and Air Lines

Parking Brake Control: The park or emergency brake is spring applied and air released. A released valve built into the control won't allow the park brake to be released until enough pressure is put in to lift it up to at least 750 kPa (110 psi, 1000 ft. lbf). The same valve allows the release of control pressure to lock. To apply the park or emergency brake, push in or control valve. To release the brake, pull out on the valve.

Service Brake Control: To apply service brakes, push control forward. To release service brake, pull control to the rear.

Note: Don't operate an air valve with both hands while it's active.

Function Brake Control

The parking brake control engages a spring applied, hydraulically released brake, mounted on the wheel shaft in the carrier. It is operated as follows:

- Start the engine and let the Speed-Safe® pressure build up. The pressure must be at least 750 kPa (110 psi, 1000 ft. lbf) before the brake can be released.
- Pull out on the control to release the brake.
- Push in on the control to apply the brake.

Note: The brake will apply if pressure falls below 750 kPa (110 psi, 1000 ft. lbf).

Note: This brake is not a fail-safe device.

Low Air Control Device

The following series of paragraphs explain the operation of the various controls on the carrier. This information should be read and thoroughly understood before attempting to operate the carrier.

Ignition Switch: The ignition switch is controlled by a key to prevent starting of the engine in unauthorized persons. The key action must be turned fully to the right to engage the engine starter.

The key must be in the on position to permit use of the accelerator.

Speedometer: The speedometer indicates the speed in k.p.h., and the carrier is traveling.

Engine Oil Light: The low-oil-pressure warning light indicates the engine oil pressure drops. Temperature gauge, fuel level gauge, and meter, controls the engine gauges supplied with the machine for proper readings.

Fuel Tank Gauge: The fuel tank gauge is built in machine body and with the optional auxiliary fuel tank. Add the gauge to the left to read the fuel level in the L tank. Push the gauge to the right to read the fuel level in the R tank.

Control Brake Control: The stopping brake control, also equipped with the service brake at all

times. This brake must be applied when operating from the water.

Note: Do not use the brake when the engine is running and the carrier is in the water.

Park or Emergency Brake Control: When the emergency or park brake control is selected, air under pressure is directed to the emergency or park brake cylinders in the rear assembly, applying the brakes on the front rear axle. The carrier cannot be moved until air in the cylinder is exhausted, allowing the return springs to release the brake. A mechanical lock in the cylinder prevents the brake releasing if air pressure
