

Unit 5 Assignment

1. Two variables have a positive linear correlation. Does the dependent variable increase or decrease as the independent variable increases?

The dependent variable increases.

Good job!

When two variables have a positive linear correlation, the correlation coefficient is between 0 and 1. The linear relationship has a positive slope. Therefore, as the independent variable increases, the dependent variable also increases.

Next Question

2. Which value of r indicates a stronger correlation: $r = 0.709$ or $r = -0.933$? Explain your reasoning.

$R = -0.933$ represents a stronger correlation because $|-0.933| > |0.709|$.

Nice work!

A strong negative linear correlation has an r close to -1 . A strong positive linear correlation has an r close to 1 . A weak linear correlation has an r close to 0 .

Because -0.933 is closer to -1 than 0.709 is to 1 , -0.933 has the stronger linear correlation.

Next Question

3. Give examples of two variables that have a perfect positive linear correlation and two variables that have a perfect negative linear correlation.

Two variables that have perfect positive linear correlation are the price per gallon of gasoline and the total cost of gasoline. Two variables that have perfect negative linear correlation are the distance from a door and the height of a wheelchair ramp.

- 4.

For each of the scatter plots below, determine whether there is a perfect positive linear correlation, a strong positive linear correlation, a perfect negative linear correlation, a strong negative linear correlation, or no linear correlation between the variables.
