Gradually and step by step you will be taught how to use MySQL in Python. In the first three chapters you will learn Basic MySQL statements including how to implement querying data, sorting data, filtering data, joining tables, grouping data, subquerying data, and setting operators. Aside from learning basic SQL statements you will also learn step by step how to develop stored procedures in MySQL. First we introduce you to the stored procedure concept and discuss when you should use it. Then we show you how to use the basic elements of the procedure code such as create procedure statement, if else case loop, stored procedure's parameters. In the fourth chapter you will learn How PyQt and Qt Designer are used to create Python GUIs. How to create a basic Python GUI that utilizes a Line Edit and a Push Button. In the fifth chapter you will study Creating the initial three tables in the School database project: Teacher table, Class table, and Subject table. Creating database configuration files. Creating a Python GUI for viewing and navigating the contents of each table. Creating a Python GUI for inserting and editing tables and Creating a Python GUI to merge and query the three tables. In last chapter you will learn Creating the main form to connect all forms. Creating a project that will add three more tables to the school database: the Student table, the Parent table, and the Tuition table. Creating a Python GUI to view and navigate the contents of each table. Creating a Python GUI for editing, inserting, and deleting records in each table.
