## 0. USING THIS TUTORIAL GUIDE

---

### 0.1 What's in This Guide

This guide contains step-by-step examples that teach you how to use GAMBIT to create and mesh various geometries. Each example illustrates at least one new concept with respect to GAMBIT geometry creation and mesh generation.

Tutorial 1 includes explicit instructions for all steps in the geometry creation, mesh generation, and examination of a completed mesh. Its purpose is to introduce the beginning user to several basic features and operations that are available in GAMBIT. The remaining tutorials are designed for the user who has read or worked through Tutorial 1 or who is already familiar with GAMBIT. Consequently, they are not as explicit in their instructions as is Tutorial 1.

Tutorial 5 illustrates how to import geometry into GAMBIT from an existing file. The file that contains the geometry to be imported is located in the directory where GAMBIT is installed. (This file is included on your installation tape or CD.)

---

### 0.2 How to Use This Guide

If you are new to GAMBIT, you should first work through Tutorial 1 in order to familiarize yourself with the GAMBIT graphical user interface (GUI) and with basic geometry creation and meshing procedures. You may then want to try a tutorial that demonstrates features that you are going to use in your application. For example, if you are planning to start from an existing geometry that requires some cleanup, you should look at Tutorial 5. Each tutorial demonstrates different GAMBIT features, so it is recommended that you do each tutorial in order to get the full benefit from this Tutorial Guide.

Note that Step 1 in Tutorials 2 through 6 requires you to select the solver to be used for the CFD calculation. In many cases, you could select a different solver than the one used in the tutorial. The solver selection is included in the tutorials to demonstrate the process of selecting a solver. It also illustrates that the choice of solver dictates the options available in various forms (for example, the boundary types available in the **Specify Boundary Types** form).

Copyright Gambit Sunimal Mendis, 2019-07-05 European memory institutions are repositories of a wealth of rare documents that record public domain content. These documents are often stored in dark archives to which members of the public are granted limited access, resulting in the public domain content recorded therein being relegated to a form of forgotten knowledge. Digitisation offers a means by which such public domain content can be made speedily and easily accessible to users around the world. For this reason, it has been hailed as the harbinger of a new digital renaissance. This book examines the topical issue of the need to preserve exclusivity over digitised versions of rare documents recording public domain content. Based on data gathered through an empirical survey of digitisation projects undertaken by fourteen memory institutions in five European Union Member States, it argues for the introduction of exclusive rights in digitised versions of rare documents recording public domain textual content as a means of incentivising private sector investment in the digitisation process. It concludes by presenting a detailed proposal for a European Union Regulation that would grant memory institutions a limited term related right in digitised versions of rare documents held in their collections, subject to stringent exceptions and limitations that are designed to safeguard user interests. **ICREEC 2019** Ahmed Belasri, Sid Ahmed Beldjilali, 2020-06-10 This book highlights peer-reviewed articles from the 1st International Conference on Renewable Energy and Energy Conversion ICREEC 2019 held at Oran in Algeria.
