This book focuses on the chemistry aspect of the structure property relationship for many fascinating derivatives of graphene various properties such as electronic structure magnetism and chemical reactivity as well as potential applications in energy storage catalysis and nanoelectronics are covered The book also includes two chapters with significant experimental portions demonstrating how deep insights can be obtained by joint experimental and theoretical efforts Topics covered include Graphene ribbons Edges magnetism preparation from unzipping and electronic transport Nanographenes Properties reactivity and synthesis Clar sextet rule in nanographene and graphene nanoribbons Porous graphene nanomeshes and graphene based architecture and assemblies Doped graphene Theory synthesis characterization and applications Mechanisms of graphene growth in chemical vapor deposition Surface adsorption and functionalization of graphene Conversion between graphene and graphene oxide Applications in gas separation hydrogen storage and catalysis Graphene Chemistry Theoretical Perspectives provides a useful overview for computational and theoretical chemists who are active in this field and those who have not studied graphene before It is also a valuable resource for experimentalist scientists working on graphene and related materials who will benefit from many concepts and properties discussed here Computational and Experimental Approaches in Multi-target Pharmacology Thomas J. Anastasio, 2017-08-24 The next frontier in pharmacology is the development of multi

target strategies in which pathological processes are controlled by pharmacologically manipulating them at many different points at once Designing multi target strategies will require deep understanding of the complex physiology that underlies pathological processes It will also require the development of single drugs with multiple targets or combinations of drugs with compatible pharmacokinetics that work synergistically to maximize desirable effects while minimizing unwanted side effects This e Book contains ten original articles each addressing a different aspect of this challenge Together they open new perspectives and show the way forward in the development of multi target therapeutics Theoretical and Computational Chemistry Aspects Ponnadurai Ramasami, 2021-10-25 Based on The Virtual Conference on Chemistry and its Applications VCCA 2020 Research and Innovations in Chemical Sciences Paving the Way Forward held in August 2020 and organized by the Computational Chemistry Group of the University of Mauritius The chapters reflect a wide range of fundamental and applied research in the chemical sciences and interdisciplinary subjects *Methodologies and Applications* for Chemoinformatics and Chemical Engineering Haghi, A.
