Xianxiang Liu,Pau Loke Show,Haian Xia,Jun Yue,2023-04-06      **Biotechnology and Polymers** C.G. Gebelein,2012-12-06

The term biotechnology has emerged on the contemporary scene fairly recently but the basic concept of utilizing natural

materials either directly or in modified versions dates back to antiquity. If we search the ancient literature such as the Bible we find hundreds of examples wherein people employed or modified natural materials for a variety of important uses. As far back as the days of Noah we find pitch a natural material being used as a caulk. Clothing was made from animal skins and the products of several plants. Today we would consider these things as important biotechnological developments. Likewise the human use of polymeric materials also has a long history. In fact many of the original materials used by mankind were polymers derived from nature such as wood, flax, cotton, wool and animal skins which were used for shelter and clothing. In recent years however the concept of biotechnology has taken on a new and renewed role in our society. This is due to a combination of factors including an increased interest in environmental concerns and the desire to break free from the stranglehold that petrochemicals have placed on our society. If we can manufacture some of our polymers from renewable resources then we can expect to prepare them for many more years into the future than we might if we could only depend on the petrochemical resources.

Chemicals and Fuels from Bio-Based Building Blocks Fabrizio Cavani, Stefania Albonetti, Francesco Basile, Alessandro Gandini, 2016-02-16.
