Troutbeck,Lily Elefteriadou,2014 TRB s Transportation Research Circular E C190 Innovative Applications of the Highway Capacity Manual 2010 includes seven full technical papers and three extended abstracts focusing on applications of the Highway Capacity Manual 2010 HCM 2010 as presented at the TRB 93rd Annual Meeting in January 2014 Publisher s note *Extent of Highway Capacity Manual Use in Planning* Richard Gerhard Dowling,Aaron Elias,2012 TRB s National Cooperative Highway Research Program NCHRP Synthesis 427 Extent of Highway Capacity Manual Use in Planning assesses how state departments of transportation small and large metropolitan planning organizations and local governments are using or might use the Highway Capacity Manual for planning analyses or more specifically for performance monitoring problem identification project prioritization programming and decision making processes *The Highway Capacity Manual: A Conceptual and Research History Volume 2* Elena S. Prassas,Roger P. Roess,2020-01-08 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has also been widely used around the globe and has inspired the development of similar manuals in other countries This book is Volume II of a series on the conceptual and research origins of the methodologies found in the Highway Capacity Manual It focuses on the most complex points in a traffic system signalized and unsignalized intersections and the concepts and methodologies developed over the years to model their operations It also includes an overview of the fundamental concepts of capacity and level of service particularly as applied to intersections The historical roots of the manual and its contents are important to understanding current methodologies and improving them in the future As such this book is a valuable resource for current and future users of the Highway Capacity Manual as well as researchers and developers involved in advancing the state of the art in the field **The Highway Capacity Manual: A Conceptual and Research History** Roger . P Roess,Elena . S Prassas,2014-04-03 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has

also been widely used abroad and has spurred the development of similar manuals in other countries. The twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios. The manual also addresses related pedestrian bicycle and transit issues. This book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types. The book is comprised of two volumes. Volume 1, this book focuses on the development of basic principles and their application to uninterrupted flow facilities: freeways, multilane highways, and two-lane highways. Weaving, merging, and diverging segments on freeways and multilane highways are also discussed in detail. Volume 2 focuses on interrupted flow facilities: signalized and unsignalized intersections, urban streets, and arterials. It is intended to help users of the manual understand how concepts, approaches, and specific methodologies were developed and to understand the underlying principles that each embodies. It is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come.

Highway Capacity Manual (HCM) 2010 Based Analysis of Bicycle and Pedestrian Level of Service at Chase Elementary School Area in Athens, GA Tunan Hu, 2016. This paper used Highway Capacity Manual HCM 2010 method to analyze the bicycle and pedestrian level of service (BLOS and PLOS) at Chase Elementary School attendance zone in Athens, GA. This research examined the process of evaluating MMLOS in cities through the adoption and implementation of the HCM 2010 method, provided a current level of service condition for Chase Elementary school zone as reference. The thesis used the HCM method for a selected area and then evaluated the results as well as the implementation process. This research also looked into the North Chase Street Reconfiguration subject, calculated and compared the before and after vision of this subject to find out the level of service change and evaluate the reconfiguration performance. Finally, this paper evaluated the HCM 2010 method itself, compared it with other level of service methods, and concluded the problems and shortcomings that were met during the research period.

Application of Highway Capacity Manual 2010 Level-of-service Methodologies for Planning Deficiency Analysis James Oliver Ensley, Tennessee. Department of Transportation, National Research Council (U.S.). Transportation Research Board, 2012. Influence on investment in the infrastructure is critical for decision making by State planning departments. Judgments which are made for funding purposes and are based on limited data analysis by states can result in economic disasters for the state and nation. The Tennessee Department of Transportation (TDOT) uses the Evaluation of Roadway Efficiency (EVE) database to prioritize the importance of roadway projects in the state. In addition, EVE is also used as a method to provide deficiency analysis results for roadways in the state. This study will add support to the methodology of the current decision making process in regards to Tennessee roadways for planning. Updating the current deficiency analysis program EVE with the methodologies of the Highway Capacity Manual HCM 2010 is the foundation for improving the

decision making abilities of those using EVE for such efforts New algorithms have been developed based upon the procedures in the HCM 2010 for the following sections Freeway Two Lane Highways Multilane Highways and Urban Arterials Using these algorithms and data from Washington County in Tennessee level of service results were analyzed and compared to previous deficiency analysis results Some of these results were found to be better and other were found to be worse than the previous The new method of the HCM 2010 applied in this procedure changed 60% of the level of service ratings based on the comparable data This proves to show the update of the deficiency analysis method currently used will be beneficial in the assistance of the decision making process

It presents a two-level programming structure to deal with the effects of varying highway location on traffic level changes in surrounding road networks within the highway location search and alignment optimization process. In addition, the proposed method evaluates environmental impacts as well as all relevant highway costs associated with its construction, operation and maintenance. The monograph first covers various search methods, relevant cost functions, constraints, computational efficiency and solution quality issues arising from optimizing the highway alignment optimization (HAO) problem. It then focuses on applications of a special purpose GA in the HAO problem where numerous highway alignments are generated and evaluated and finally the best ones are selected based on costs, traffic impacts, safety, energy and environmental considerations. A review of other promising optimization methods for the HAO problem is also provided in this monograph *Intersections Control and Safety* Antonio

Pratelli,2013-05-22 Starting off a new series on Transport Systems and Traffic Engineering the book aims to help bridge the gap between research and practice encouraging a critical dialogue in different specific subjects spanning innovation development and technology transfer Those who offer innovation often do not meet the immediate needs of practitioners especially in the traditional field of civil engineering Still the adequate diffusion of research results and wisdom derived from practical experience are crucial to both theoretical underpinnings and technical applications The papers forming this book are devoted to intersection control and safety and have been selected bearing in mind the criteria stated above That is these papers provide both scholarly contribution as well as vision for application As a general rule about one third of all highway crashes happen at intersections This rule holds for many different countries Intersection crashes also represent a significant portion of serious injury crashes and by right are receiving considerable attention from researchers and practitioners alike This book is therefore devoted to relevant safety aspects of road intersections and innovative features in design and operations that may address the intersection crash problem The thirteen papers are more or less equally devoted to roundabouts and signals These papers cover many of the most recent and emerging issues related to intersection control and safety Topics range from design details to driver perception from pedestrians behaviour to signal timing and from capacity models to red light running The book will be useful for those wishing to expand their knowledge of this ever important subject area
