Normal operations of the GIL can be substantiated by comparing the diagnostic tool and displaying GIL, LPT32L, CONSOLE. Read the number of counts when the engine is not running, but the system is ON. The count reading should be zero (0). Turn the engine and observe the counts. In normal operation, the count should be 100-1200 because the oil level drops when the engine starts, and oil from the pump is introduced to other parts of the transmission.

NOTE Independent connections to both of battery-driven power and ground connections are shown. This and other electronic control codes.
