## Backlight

### Auto light switch on indicator

The backlight uses an EL (electro-luminescent) panel that causes the entire display to glow for easy reading in the dark. The watch's auto light switch automatically turns on the backlight when you angle the watch towards your face in the dark.

- The auto light switch must be turned on (indicated by indicator) for it to operate.
- See "Backlight (Precautions)" for other important information about using the backlight.

### To turn on the backlight manually

- In any mode, press (1) to illuminate the display for about one second.
- The above operation turns on the backlight regardless of the current auto light switch setting.

### About the Auto Light Switch

Turning on the auto light switch causes the backlight to turn on for about one second, whenever you position your wrist as described below in any mode. Note that this watch features a "Full Auto EL Light," so the auto light switch operates only when available light is below a certain level. It does not turn on the backlight under bright light.

Moving the watch to a position that is parallel to the ground and then tilting it towards you more than 40 degrees causes the backlight to turn on.

### Warning

- Always make sure you are in a safe place whenever you are needing the display of the watch using the auto light switch, the especially careful when running or engaged in any other activity that can result in accident or injury. Also take care that sudden illumination by the auto light switch does not surprise or distract others around you.
- When you are wearing the watch, make sure that its auto light switch is turned off before riding on a bicycle or operating a motorcycle or any other motor vehicle. Sudden and unexpected operation of the auto light switch can create a distraction, which can result in a traffic accident and serious personal injury.

### To turn the auto light switch on and off

- In any mode, hold down (1) for about two seconds to toggle the auto light switch on ( displayed) or off ( not displayed).
- The auto light switch on indicator () is on the display in all modes while the auto light switch is turned on.

## Battery

This watch is equipped with a solar cell and a rechargeable battery (secondary battery) that is charged by the electrical power produced by the solar cell. The illustration shown below shows how you should position the watch for charging.

### Example: Orient the watch so its face is pointing at a light source.

- Place that charging efficiency drops when any part of the solar cell is blocked by clothing, etc.
- The illustration shows how to position a watch with a resin band.

### Important!

- Storing the watch for long periods in an area where there is no light or ensuring it in such a way that it is blocked from exposure to light can cause rechargeable battery power to run down. Be sure that the watch is normally exposed to bright light whenever possible.
- This watch employs a solar cell that converts light into electricity that charges a built-in rechargeable battery. Normally, the rechargeable battery should not need replacement, but after very long use over a number of years, the rechargeable battery may lose its ability to achieve a full charge. Should you notice problems with getting the rechargeable battery to a full charge, contact your dealer or CASIO distributor about having the rechargeable battery replaced.
- The rechargeable battery should be replaced with a CASIO-specified CRTL1616 battery only. Other rechargeable batteries can cause damage to the watch.
- All data stored in memory is lost, and the current time and all other settings return to their initial factory defaults whenever battery power drops to Level 4 and when you have the battery replaced.
- Turn on the watch's Power Saving Function and keep it in an area normally exposed to bright light when storing it for long periods. This helps to keep the rechargeable battery from going dead.

### Battery Power Indicator

The battery power indicator on the display shows you the current status of the rechargeable battery's power.

| Level | Battery Power Indicator | Function Status                                                                           |

| 2     |                         | All functions enabled.                                                                    |
| 3     |                         | Sleeper tone, backlight, calibration signal reception, display, and buttons are disabled. |
| 4     |                         | All functions, including timekeeping, are disabled.                                       |
