**Manual of Heart Failure Management** Harikrishnan S, 2021-11-02 Heart failure is a serious condition caused by the heart failing to pump enough blood around the body at the right pressure. It usually occurs because the heart muscle has become too weak or stiff to work properly, most commonly caused by heart attack, high blood pressure, or cardiomyopathy, heart disease. This book is a comprehensive guide to the diagnosis and management of heart failure. Divided into 81 sections, the book begins with an overview of heart failure, its epidemiology, types, assessment, and diagnosis, and imaging. Each of the following chapters provides in-depth detail on a different type or cause of heart failure, concluding with discussion on intravenous drug administration. With more than 100 contributors, the text is further enhanced by charts and tables, making it an excellent quick reference guide for both practising cardiologists and trainees. Key points. Comprehensive guide to diagnosis and management of heart failure. Covers numerous different types and causes. More than 100 expert contributors. Highly illustrated with charts and tables.

*Co-simulations of Microwave Circuits and High-Frequency Electromagnetic Fields* Mei Song Tong, Xiao Yu Li, 2024-07-03 This book aims to provide many advanced application topics for microwave circuits and high-frequency electromagnetic (EM) fields by using advanced design system ADS and high-frequency structure simulator HFSS as simulation platforms. In particular, it contains the latest multidisciplinary co-simulation guidance on the design of relevant components and devices. Currently, the circuit field design and performance analysis and optimization strongly rely on various kinds of robust electronic design automation (EDA) software. RF microwave engineers must grasp two or more types of related simulation design software: ADS by Keysight and HFSS by Ansys are the representative for circuit simulations, and for field and structural simulations of microwave devices, respectively. At present, these two types of software are widely used in enterprises, universities, and research institutions. The main purpose of this book is to enable readers who are interested in microwave engineering and applied electromagnetics to master the applications of these two tools. It also helps readers expand their knowledge boundaries behind those types of software and deepen their understanding of

developing interdisciplinary technologies by co simulations The book is divided into three parts The first part introduces the two latest versions of ADS and HFSS and helps readers better understand the basic principles and latest functions better It also advises how to choose appropriate simulation tools for different problems The second part mainly describes co simulations for high frequency EM fields microwave circuits antenna designs EM compatibility EMC and thermal and structural analyses It provides guides and advices on performing co simulations by ADS and HFSS incorporated with other types of software respectively The last part narrates the automation interfaces and script programming methods for co simulations It primarily deals with the Advanced Extension Language AEL Python Data Link PDL and MATLAB interface in ADS For HFSS it discusses VBScript IronPython scripting and Application Programming Interface APIs based on MATLAB Each topic contains practical examples to help readers understand so that they can gain a solid knowledge and skills regarding automated interfaces and scripting methods based on these kinds of software Concisely written in combination with practical examples this book is very suitable as a textbook in introductory courses on microwave circuit and EM simulations and also as a supplementary textbook in many courses on electronics microwave engineering communication engineering and related fields As well it can serve as a reference book for microwave engineers and researchers
