Hydrogel Sensors and Actuators Gerald Gerlach, K.-F. Arndt, 2009-09-24 Hydrogels are a fascinating class of polymers which show an immense ability of swelling under the influence of temperature pH value or concentrations of different species in aqueous solutions The volume change can amount up to several hundred percent This unique behaviour is already used in such applications like disposable diapers contact lenses or drug delivery systems The ability to perform mechanical work has been shifted the technical interest more and more towards sensors and actuators exploiting the thermo chemo mechano electrical coupling within hydrogels The accuracy requirements for such devices are much more demanding than for previous applications Therefore a deep knowledge of both the material and the functional properties of hydrogel sensors and actuators is needed The monograph describes state of the art and recent developments for these materials in sensor and actuator technology

Gels Handbook: Fundamentals, Properties, Applications (In 3 Volumes), 2016-01-25 Hydrogels are made from a three dimensional network of cross linked hydrophilic polymers or colloidal particles that contain a large fraction of water In recent years hydrogels have attracted significant attention for a variety of

applications in biology and medicine This has resulted in significant advances in the design and engineering of hydrogels to meet the needs of these applications This handbook explores significant development of hydrogels from characterization and applications Volume 1 covers state of art knowledge and techniques of fundamental aspects of hydrogel physics and chemistry with an eye on bioengineering applications Volume 2 explores the use of hydrogels in the interdisciplinary field of tissue engineering Lastly volume 3 focuses on two important aspects of hydrogels that is drug delivery and biosensing Contains 50 colour pages
